

Growth Strategy

Fortress Massachusetts: converting an inertia-held #1 franchise into a defended, densified, digitally-armed one — inside a 12–24 month window that will not reopen.

July 2, 2026

Prepared from a 22-brief public-source research corpus (~659 citations), an adversarial fact-check of the 60 load-bearing claims, and three competing strategy proposals scored by an independent three-judge panel on capital efficiency, executability, and competitive durability.

1. Executive Summary

The situation: margin repaired, share surrendered, four clocks running

MAPFRE's U.S. turnaround is complete — and it was paid for in market share. North America moved from a 105.4% combined ratio and a near-zero result in 2023 to 95.4% and a record €139M in 2025, on more than 29% of cumulative rate. The price was roughly four points of Massachusetts private passenger auto share (22.1% in 2020 to 18.33% at December 2025), essentially all of it transferred to Progressive (5.1% to 12.17%) — much of it through MAPFRE's own ~1,300 appointed agents — and MAPFRE fell out of the NAIC top-25 U.S. auto writers in 2024.

The franchise that remains is still formidable and still #1: 908,833 Massachusetts auto exposures, the #1 position in Massachusetts homeowners, the state's largest group-discount franchise (280 §193R deviations; Progressive holds zero), one of four CAR commercial servicing-carrier seats, and a modern Guidewire core live since 2020. But it is inertia-held, not defended. The website quotes but cannot bind a policy; MAPFRE is absent from the EZLynx rater that consolidators standardize on; its telematics discount has decayed to a token level; its claims record has sat in the bottom quintile of national claims-satisfaction rankings for six years (17th of 21 in 2024), with regional customer-satisfaction scores in the bottom tier (597 vs. Amica's 735 in the 2025 New England study); and homeowners share (10.62%) is barely half of auto share — a ~\$275M parity gap sitting with agents already under contract.

The burning platform is arithmetic plus a calendar. In a \$7.38B Massachusetts auto market growing only on rate, each share point is ~\$74M of annual premium, and drift is quantified: passive runoff of the >\$200M AAA-sourced book (retaining only 25–30%), resumed erosion of ~0.5 point per year once competitors finish repricing, and a continued homeowners slide would shrink the ~\$2.6B U.S. book to ~\$2.25–2.35B by 2030–31 at a 96–98% combined ratio — a ~\$450–650M annual-premium swing against the strategy case, with the concentration problem worse, not better. Meanwhile four hard clocks expire inside 18 months: the >\$200M AAA agreement ends 12/31/2026 with the January 2027 renewal wall behind it; the CAR commercial servicing seat expires the same day with the RFP imminent; Liberty retired the Safeco brand in April 2026, leaving 22,000 agencies uncontested — for now; and Safety, Plymouth Rock and Arbella are still filing rate increases into late 2026 while Commerce, at a 97.8% auto combined ratio, can hold rate and reopen a price gap. None of these openings recurs.

The thesis

Win more of the fights MAPFRE is already in: convert an inertia-held #1 Massachusetts franchise into a defended, densified, digitally-armed one — during a 12–24 month window in which every major competitor is disrupted, repricing, or distracted, and after which the window closes — with zero new states and zero M&A.

There is no growth dollar anywhere in the Northeast as cheap as the next dollar in Massachusetts: one MA auto share point (~\$74M) exceeds the entire New Hampshire expansion prize (~\$49M at a heroic 4% share), and the state's rating-factor bans and group-deviation regime structurally favor the local incumbent that executes.

MAPFRE's fragility is monoline shallowness inside Massachusetts — not Massachusetts itself.

Four pillars, fourteen initiatives — every one with an owner, a budget, and a falsifiable metric

1. **Win the agent's desktop** (\$28–42M): rater APIs and the EZLynx gap closed; change-of-control-surviving platform agreements with the consolidators rolling up ~12% of the agency plant (~\$150–160M of premium protected); a first-mover Safeco transition desk launched this quarter; loss-ratio-gated compensation. *Impact: ~\$74–110M of share recapture plus ~\$150–160M defended.*
2. **Defend and densify the book** (\$38–61M): the AAA retention offensive before the January 2027 renewal wall (\$40–70M/yr defended vs. passive runoff — the largest defended-dollars-per-dollar item on the board); group-deviation deepening (\$18–36M); homeowners from 10.6% to ~13% with a bundle offensive (\$95–115M of growth, plus ~\$20M/yr of bundle-retained auto counted as defended premium, coastal capped at \$30–40M and gated); the 90-day commercial-auto leak diagnosis and the CAR seat bid (~\$25–35M).
3. **Price and reach where competitors can't** (\$19–35M): MotionSmart refiled symmetric at 8–10%/±20% — the only high-dimensional pricing lever Massachusetts law permits — worth 0.5–1.0 combined-ratio points; a pilot-gated trilingual urban credit-harvest program in the territories where the state actually grows (\$20–29M plus \$3–9M/yr of MAIP drag shed); an agent-assigned bind-online pilot on the Plymouth Rock Prime model, sequenced after agent enablement (\$25–40M steady state).
4. **Self-fund and repair the flank** (\$12–22M): claims-economics self-help of \$20–40M/yr (~1–1.5 CR points) led by subrogation analytics; the claims operating-model fix put on the executive scorecard; a West Coast hold/fix/sell review creating a capital-release option that could offset a substantial share of the program's cost (block sizing from the statutory statements is a data-room item).

An explicit ten-item "will NOT do" list — no New England expansion, no bolt-on M&A, no equity to affinity clubs, no direct-channel scale case, no replatforming — is adopted by board resolution as standing constraints, because executive bandwidth, not capital, is the scarcest resource.

The five-year ambition

Metric (YE2030–31)	2025 actual	Drift baseline	Strategy case
U.S. group DWP	~\$2.6B	~\$2.25–2.35B	~\$2.8–2.9B
MA auto share (exposures)	18.33%	~15.5–16%	≥19.0–19.5%
MA homeowners share	10.6%	~9.5–10%	~13.0%
U.S. combined ratio	95.4%	96–98%	≤96.5% in 2026–27, ≤96% from 2028; ~94.5–95.5% exit
MA auto % of U.S. book	~51%	~53–56%	~47–49% (diversified by product, not state)

Metric (YE2030–31)	2025 actual	Drift baseline	Strategy case
MA all-lines % of U.S. book	~75–80%	~73–76% (of a smaller book)	~79–81%

One row deserves a plain statement: MA all-lines stays at roughly three-quarters or more of U.S. premium under the strategy, because every growth dollar in this plan is a Massachusetts dollar. That is deliberate — the plan diversifies by product and customer while deepening the state, and the state axis is explicitly deferred to the post-2028 gate, when a bind-capable platform, repaired claims economics, and a scaled telematics book make any adjacency cheaper (the argument is made in full in Strategic Options).

Net effect versus drift: ~\$260–370M of identified annual growth, plus ~\$60–90M of defended premium (the AAA retention delta and bundle-retained auto), plus ~\$250–350M of drift losses avoided — a ~\$450–650M swing versus the drift baseline (the components partially overlap; the Financial Business Case reconciles them line by line) — with defended premium never counted as growth and no rate-inflation credit taken.

Investment and payback

The ask is **\$85–135M over three years** (~1–1.5% of premium per year; ~\$45–60M in year 1) — one-third to one-half of the \$246.7M of dividends Commerce exported to Madrid through its loss-and-recovery years of 2019–23. The recommended mechanism is a two-to-three-year reduced-dividend agreement — retained U.S. earnings, not a capital injection: Commerce's surplus and its ~€118M annual U.S. result can carry the program without new capital. Peak cumulative cash exposure is ~\$65M in 2027; cumulative breakeven lands in 2029; run-rate return is ~\$50–65M/yr thereafter (illustrative IRR ~35–45%), with Pillar 4 self-help offsetting 50–70% of annualized program cost. A simultaneous-stress downside case — including the scenario where Pillar 1 only halves, rather than halts, the underlying share erosion — still delivers ~\$120–220M of growth, because every large assumption carries a pre-committed gate that removes the spend with the revenue. The contract with Madrid is falsifiable at YE2028 on three trajectory gates: **MA auto ≥18.6% and rising for two consecutive quarters; MA home ≥11.7% with bundle attach ≥40%; combined ratio ≤96%** — checkpoints set on the modeled path to ≥19% auto and ~13% home by 2030–31. Meet the gates and the diversification conversation reopens from strength; miss them and re-scope, not escalation, is pre-committed.

The top three risks

1. **Execution capacity.** The program breaks at the executive layer first; this organization has shipped little customer-facing on its modern core in six years. Mitigation: only three 2026 must-wins (AAA, CAR RFP, Safeco desk) may not slip; a CEO-reporting program office; the kill list stays killed.
2. **The AAA book walks faster than planned** to pool-subsidized MCIC pricing. Mitigation: the bundle — not price — as the retention weapon, premium-quality-weighted triage, and a Q2 2027 re-scope gate.
3. **Madrid's 2017 retrenchment reflex fires mid-program.** Mitigation: the dividend-redeployment funding frame, 50–70% self-funding, and pre-signed gate logic that makes the exit disciplined rather than reflexive.

The first-100-days ask

By July 17: a board resolution adopting the strategy, the kill list, and the YE2028 gates; the Safeco transition desk launched publicly within 30 days; the AAA retention task force stood up with settlement architecture opened; the CAR RFP war room live; and the interim funnel-leak fix switched on — every completed website quote routed to a local agent as a consented warm lead within 24 hours, ahead of any bind capability. By day 100: the Madrid funding paper delivered and the ~\$45–60M year-1 tranche on track for Q4 2026 approval, the MotionSmart symmetric filing in build, the commercial-auto diagnosis reported, claims KPIs on the executive scorecard, and the first group-deviation deepenings filed. Every month of delay before the January 2027 AAA wall is unrecoverable — this strategy fails through softness in 2026, not surprises in 2028.

2. Situation Assessment: MAPFRE Today

MAPFRE Insurance enters July 2026 in a position no competitor would trade for and no board should be comfortable with. The U.S. unit has just completed the most successful margin repair in its history — a 105.4% combined ratio in 2023 turned into 95.4% and a record €139M North America result in 2025 [1][2][3]. But the repair was paid for in share: roughly four points of Massachusetts private passenger auto, essentially all of it transferred to Progressive, much of it through MAPFRE's own agents [4][5]. The company is simultaneously the strongest franchise in the most independent-agent-friendly state in America and a carrier whose top line has gone flat-to-negative, whose largest affinity channel expires in six months, and whose website still cannot bind a policy. This chapter states where the company actually stands — performance, concentration, strengths, weaknesses — and closes with the arithmetic that makes change non-optional.

The turnaround is real, complete, and paid for — profitability is fixed; growth is not

The 2022–23 auto-severity shock hit MAPFRE harder than its Massachusetts peers. The Commerce Insurance Company, the lead pool entity, posted a \$109.2M statutory underwriting loss and a \$41.5M net loss in 2023; policyholders' surplus fell from \$684M (2021) to \$561M (2023) [6]. Management responded with rate — more than 29% of cumulative U.S. auto increases from January 2022 through end-2023, including Massachusetts filings up to ~13% in 2023 [2][7] — and the underwriting result followed:

North America segment (IFRS)	2022	2023	2024	2025
Combined ratio (non-life)	~108%	105.4%	98.7%	95.4%
Auto combined ratio	~110%	107.1%	101.2%	97.8%
Net attributable result	loss	-€1.8M	+€97.6M	+€139M (US: €118.2M)
Premiums (US, €)	—	~€2.3B	~€2.4B	~€2.3B (flat local currency)

Sources: [1][2][3]. 2022 ratios derived from MAPFRE's stated year-over-year deltas.

Three facts qualify the celebration:

1. **The result is rate- and weather-assisted, not operationally transformed.** MAPFRE's own releases credit "technical measures and tariff adjustments" plus benign H2-2025 weather [1]. The parent knows part of 2025 was luck.
2. **The top line went backwards while the bottom line recovered.** 2025 North America premiums declined 4.6% in euros and were roughly flat in local currency [1]. MAPFRE ranked 21st among U.S. private passenger auto writers in 2023 at \$1.40B of DWP — and dropped out of the NAIC top 25 entirely in 2024 [8].

3. **The share bill has been itemized.** Commerce's Massachusetts private passenger auto share fell from ~22.1% of exposures (2020) to 18.33% (December 2025, 908,833 exposures); over the same window Progressive rose from 5.1% to 12.17%, overtaking GEICO in May 2025 [4][5]. In homeowners — MAPFRE's #1-ranked second product — voluntary-market share fell from 12.5% (2023) to 11.0% (2024) in a market that grew 12.7% [9]. A single point of Massachusetts auto share is ~\$74M of annual premium on the state's \$7.381B market [10]; the share ceded since 2020 is therefore a ~\$280–300M annual revenue stream handed to competitors (calculated from [4][10]).

The strategic meaning: for the first time in a decade, MAPFRE has both underwriting headroom (97.8% auto CR against peers still repricing) and an explicit parent mandate — Madrid's Q4-2025 message for 2026 is "profitable growth" in policy count and average premium, inside the existing footprint [11]. The license to grow exists. The growth engine does not.

The concentration diagnosis: two axes, two denominators — and two different remedies

Management's commonly cited "~80% Massachusetts personal auto" and the public statutory decomposition are best read side by side, because they answer on different denominators. On 2024 group statutory data:

Concentration measure	Value	Basis
Massachusetts, all lines, share of US premium	~ 75–80% (~\$2.0B of ~\$2.6B)	[12][3]
MA private passenger auto alone	~ 51% (\$1.326B)	[13]
MA personal lines (auto + home)	~66%	[13] [14]
MA all-lines market position	#1 P&C group in the state, 8.56%	[12]
Presence in other New England states	not top-10 in auto or home in any of CT/RI/NH/ME/VT despite licensure	[13] [14]
Residual non-Northeast book	West Coast (Commerce West: CA/OR/AZ) — strategically orphaned	[6][15]

Reconciled: on the group statutory basis, MA private passenger auto is ~51% of U.S. DWP while Massachusetts *all-lines* is ~75–80% — so the state concentration is at least as high as management's framing suggests, while the product concentration is lower. Management's ~80% figure most plausibly reflects a narrower internal revenue basis (e.g., the Northeast operating unit excluding Commerce West, or all Massachusetts personal-auto entities combined); a denominator reconciliation against internal ledgers is on the data-room request list, and nothing strategic turns on which basis is used. The two axes carry different risks and different remedies: the product axis can be attacked cheaply through the same ~1,300 Massachusetts agencies (homeowners parity alone is worth ~\$275M of annual premium [14]); the state axis is expensive to attack and, per the parent's guardrails, off the table this cycle [11].

Concentration is also priced into the company's ratings. AM Best affirmed A (Excellent) / "a+" stable for all five U.S. pool members on October 23, 2025 — fully competitive paper for the agency channel — but its standalone assessments of MAPFRE USA describe "marginal operating performance" and a "neutral business profile," with the ratings explicitly supported by the parent [16][17]. A #1 market share whose rating leans on Madrid is the actuarial definition of a franchise that earns less than its position should.

One more number belongs in this diagnosis because it frames the funding conversation later in this document: through its five loss-and-recovery years 2019–2023, Commerce paid **\$246.7M of dividends** up to the parent [6]. The U.S. unit remained a cash exporter even while its surplus fell 18%. Capital discipline is not the constraint; direction of capital is.

Where the share went, and why it was not a price story

Essentially all of MAPFRE's ~4-point Massachusetts loss maps to Progressive's 7-point gain — and Progressive attacks from both channels, having appointed Massachusetts agents since 2014 and become the #1 independent-agency auto writer nationally [5][18]. The mechanism was distribution technology and pricing tools, not headline rate:

- **The agent's desktop.** Real-time appetite is now agents' #1 carrier-selection factor (29%, up from 12%); 83% of agents say they would write more business with real-time quoting inside their management systems [19]. MAPFRE is absent from the EZLynx Massachusetts panel — the rater stack national consolidators standardize on — while Progressive and Safety are on it [20]. J.D. Power's 2025 agent study shows a 274-point satisfaction gap for carriers rated "very easy" to work with; only 40% of personal-lines agents call their carriers easy [21].
- **Pricing tools the law permits.** Massachusetts' rating-factor bans under 211 CMR 79.04 (enumerated in the Market & Competitive Landscape chapter) [22] make telematics the only high-dimensional segmentation lever available, and the carrier taking MAPFRE's share calls usage-based data its single most predictive variable, at 3x the next best [18]. MAPFRE's MotionSmart went backwards: the advertised discount shrank from up to 10% at its 2021 launch to up to 2% today, below every visible Massachusetts competitor [23].
- **Not expenses, not rate level per se.** MAPFRE runs a ~29.0% statutory expense ratio — parity with Safety (29–30%), not advantage [6][24]. The 2022–23 damage was a loss-ratio problem, since corrected. All four Massachusetts agency carriers converged at ~99–101% combined ratios in 2024; the differentiator has become growth, where Safety (+7.2% DWP in 2025) and Plymouth Rock's independent-agency group (+23% in 2024, to \$1.3B) grew while MAPFRE's top line stalled [24][25].

The honest conclusion: MAPFRE lost share on capability, in its own channel, to a competitor using MAPFRE's own agents. That is repairable — and it defines exactly where the repair money goes.

Strengths: the assets a competitor cannot buy or copy

A skeptical reader should discount incumbency claims; these are structural, verifiable, and mostly unique.

Asset	Evidence	Why it is hard to copy
#1 MA private passenger auto, ~909K exposures	18.33% share, Dec 2025 [4]	Largest cross-sell and telematics-enrollment base in the state
#1 MA homeowners, at half the auto share	10.62% share; 30.0% loss ratio in 2024 [14]	Progressive has no MA home machine at scale; bundling lifts retention from ~85% to ~95% [26]
Largest P&C group in MA overall	8.56% all-lines [12]	Scale at double Safety/Plymouth Rock
\$193R group-deviation franchise	280 approved groups — the largest in the state; GEICO holds 8, Progressive zero; participation rule waived through 2030 [27]	The one regulator-sanctioned headline price weapon; open to any carrier by filing, but replicating a 280-group franchise means 12–24 months of group-by-group sponsor negotiation against the incumbent holding the anchor relationships
Deep agency plant in the most IA-penetrated state in America	~1,300 MA agencies; 78.8% of MA P&C premium flows through IAs [28]	GEICO's \$1.4B ad budget touches none of this battlefield
One of four CAR commercial servicing-carrier seats	Current five-year term runs through 12/31/2026 [29]	Expense-allowance income plus an information moat over ~18–19% of the commercial-auto market
Modern core, already paid for	Full Guidewire InsuranceSuite live for personal lines since Nov 2020; commercial on Guidewire Cloud/AWS; ePICS photo appraisal, One Inc instant payments, Shift fraud AI already fielded [30][31]	The "legacy system" excuse does not apply; remaining gaps are productization, not replatforming
Rating and parent capital	A/a+ stable (affirmed Oct 2025) [16]; parent at record profitability (€1.1B net, 2025) with raised targets and a stated preference for growth in-footprint [1][11]	Competitors face the same market with less patient capital
A genuine bridge to the only growing customer pools	Latinos were ~8 in 10 net new MA residents 2014–23; ~140K+ Portuguese-speaking Brazilians are owned by no carrier; MAPFRE operates at scale in Puerto Rico [32]	A trilingual brand bridge no Massachusetts rival possesses

Add the market's structure itself: Massachusetts' rating-factor bans neutralize national carriers' biggest segmentation weapons [22], and the rules reward the local incumbent that executes. The problem, documented next, is execution.

Weaknesses: stated plainly

1. **The company cannot sell its own product online.** The website quotes but cannot bind — so MAPFRE pays to generate demand and then hands it to competitors' funnels, during record shopping (47.1% of U.S. policies shopped in the past 12 months) and a minimum-limits repricing wave that lifted minimum-coverage premiums ~36% to ~\$711 from July 2025 [33][34]. Carriers with direct channels — Progressive plus GEICO

— already hold ~23.5% of Massachusetts exposures [5], a figure that if anything understates the direct threat and overstates it at once: Progressive also writes through agents, and its share splits across both channels. This is a self-inflicted leak: no Massachusetts rule prevents online binding [22].

2. **Agent-facing technology is conspicuously underinvested for a 100% IA carrier.** No visible agent-API program, absence from the EZLynx MA panel, and — striking in the public record — agent-channel technology does not appear among the U.S. digital leadership's stated priorities [20][31]. The benchmarks (83% of agents would shift volume; 274-point ease-of-business gap) quantify what this costs [19][21].
3. **Customer experience is a six-year, measured deficit — and the tools already bought have not moved it.** MAPFRE scored 597 in J.D. Power's 2025 New England auto study against regional leader Amica's 735 (Progressive, Farmers and The Hanover scored lower; MAPFRE was not last), and 595 in the 2026 study — a chronic bottom-tier pattern that extends through national claims rankings (17th of 21 in 2024; second-to-last in 2020) [35][36]. The company has fielded ePICS, One Inc and Shift and still posts these scores [30] [31]: the constraint is operating model, not software. Claimants are precisely the customers most likely to shop; an inertia-held #1 share with bottom-tier claims experience is unstable by construction.
4. **Telematics went backwards while every competitor armed up.** MotionSmart's 10% → 2% discount decay [23] left MAPFRE's best risks exposed to Snapshot's skim in the one state where telematics is the only permitted high-dimensional pricing lever.
5. **MAPFRE over-pays the residual-market tax.** Commerce absorbs 30.4% of MAIP assigned business against an 18.1% voluntary share — roughly 1.7x its pro-rata burden, versus ~0.7x for Safety — because competitors offset quotas with credits earned writing voluntary urban business that MAPFRE largely does not write. Estimated drag: \$3–9M/yr at current rate adequacy (assumption-flagged; no public MAIP loss ratios exist) [37][38].
6. **The #2 commercial franchise is leaking.** Commerce's MA commercial auto book shrank ~4.5% year over year (Aug 2024 → Aug 2025) while the market grew ~3% and Arbella grew ~14% — share loss in the one commercial line MAPFRE leads, undiagnosed [39].
7. **No articulated growth strategy, and a discoverable retrenchment record.** No public statement articulates a U.S. growth or direct-channel ambition [40]; the group's own U.S. direct experiment (Verti USA) launched in 2017 and quietly ceased sales by ~late 2021 [11]; management told investors in February 2020 it wanted further exits. Agents and acquirers can read that record.

The burning platform, in numbers

Four clocks are running, and the drift arithmetic is not a scare scenario — it is the observed trend extended.

The clocks.

- **December 31, 2026:** the AAA Northeast joint marketing agreement — **more than \$200M of 2025 premium, ~8% of the U.S. book, ~2–2.3 points of MA auto share** (on the planning assumption that ~75–85% of the book is MA personal auto; the composition is data-room request #1) — expires. The injunction

was denied February 3, 2026; AAA's replacement carrier is stood up but shows no measurable Massachusetts share through February 2026, so migration concentrates in **January 2027+ renewals**. The retention window is the second half of 2026 — now [41][42][43].

- **December 31, 2026:** the CAR commercial servicing-carrier appointment — one of four seats — expires; the reappointment RFP cycle is imminent [29].
- **April 25, 2026 (already struck):** Liberty retired the Safeco brand — a ~\$14B, 22,000-agency IA book folded into a brand that competes with its own agents. As of July 2026, no competitor has publicly launched a recruiting campaign. That uncontested window is realistically 6–12 months [44].
- **A 12–18 month price window:** Safety, Plymouth Rock and Arbella are still filing rate increases into late 2026 after 101–108% combined ratios, while Commerce, at a 97.8% auto CR, can hold rate and reopen a price gap for the first time since 2021 [24][25][1].

The drift baseline (built year by year in the Financial Business Case; stated assumptions: passive AAA retention of 25–30%; share erosion resuming at ~0.5 pt/yr as competitors finish repricing; the home-share slide continuing). The share arithmetic is auditable in one line: 18.33% today, less ~1.4–1.7 points of AAA passive runoff (the MA-auto portion, on the ~75–85% composition assumption), less ~1.0–1.4 points of resumed net erosion ≈ 15.2–15.9% — published conservatively as **~15.5–16% by 2030–31**, with home drifting to ~9.5–10% and U.S. group DWP to **~\$2.25–2.35B** at a 96–98% combined ratio (shrinking book, fixed-cost strain, full MAIP overburden) [1][4][9][41].

Stated as one sentence for the board: **absent intervention, a ~\$2.6B franchise at a 95.4% combined ratio becomes a ~\$2.3B franchise at 96–98% within five years — a ~\$450–650M swing versus the strategy case — while the cheapest growth dollar in the Northeast (~\$74M per Massachusetts auto share point, winnable through ~1,300 agents already under contract, at rates already filed, on a core already built) goes to Progressive instead.** The margin repair bought the right to act. The four clocks above define when. The remaining chapters define how.

3. Market & Competitive Landscape

Massachusetts personal auto is a \$7.4B market that grows on rate, not units — so every growth dollar is a share dollar

Massachusetts private passenger auto wrote **\$7.381B of direct premium in 2024** — 47% of New England's \$15.6B and the largest personal auto market in the region [1]. That premium is up roughly **32% since 2021 (\$5.6B)**, and effectively none of the growth came from units: cumulative approved rate increases for the seven largest carriers ran **~38% from 2022 through late 2024** (>12% average in 2023 alone — the largest one-year hike since at least 2015; GEICO took ~26%) [2][3]. The insured-vehicle pool is flat-to-shrinking — 4.96M written exposures at December 2025, and February 2026 year-to-date written exposures ran **~18,700 (-2.2%) below the February 2025 year-to-date reading** (CAR partial-year basis; CAR figures are cumulative and comparable only same-month across years) [4][5]. Rate momentum is now fading as carriers restore margin.

Three structural consequences follow, and they frame every chapter after this one:

1. **Top-line growth reverts to share capture.** With units flat and the rate tailwind decelerating, the only organic growth available in MA auto is taking policies from named competitors. One point of share **≈ \$74M of annual premium** on the 2024 market.
2. **The market is concentrated and agent-mediated.** The top 5 carriers hold **59.1%** of exposures and the top 10 hold **84.6%** (Oct 2025) [6]; Massachusetts is the most independent-agent-penetrated state in America at **78.8% of P&C premium** [7]. Share moves through MAPFRE's ~1,300 appointed agencies and the remainder of the state's agency plant, not through mass acquisition of unattached shoppers.
3. **The book is in motion right now.** A record **47.1% of in-force policies were shopped** in the twelve months to Q4 2025, with direct-channel new business +12.6% YoY against **-0.1%** for independent agents [8]. The July 1, 2025 increase in mandatory minimum limits (20/40/5 → 25/50/30) repriced minimum-coverage policies **~36% upward to ~\$711/yr** [9] — a statutory shopping trigger aimed squarely at price-sensitive urban and minimum-limits segments. Whoever fields the best quote path during this shopping wave inherits the moving book.

Loss costs are severity-driven, not frequency-driven: bodily injury severity +9.2% YoY, ADAS calibrations now on >35% of direct-repair estimates, and Massachusetts' mandated zero-/low-deductible glass option amplifies calibration-era physical damage costs [1][10]. The state nevertheless remains structurally better than average for underwriters — statewide PPA loss ratio of **62.2% in 2024** versus 71.6% in 2023, post-correction [1][11] — which is precisely why every national carrier now wants back in.

Market share: more than a decade of MAPFRE erosion (~10 points since 2012, per the engagement market brief) that stopped in 2025 — with the

post-2020 losses transferred essentially in full to Progressive

MA private passenger auto share of written exposures (CAR data)

Rank (Dec 2025)	Carrier	Nov 2021	Dec 2024	Dec 2025	Trajectory
1	Commerce (MAPFRE)	21.5%	19.0%	18.33%	–4 pts since 2020 (22.1%); stabilized 2025, ticked up early 2026
2	Progressive	5.8%	9.8%	12.17%	Fastest riser; +7 pts in five years; passed GEICO May 2025
3	GEICO	15.8%	12.6%	11.50%	–5 pts from Sept 2022 peak (16.3%); now re-arming
4	Safety	7.9%	9.6%	9.30%	Grew through hard market; now slipping post-repricing
5	Plymouth Rock	6.5%	7.7%	7.88%	Modest gains; hybrid direct build underway
6	Arbella	7.7%	7.3%	7.08%	Flat-to-down; corrective rate still earning in
7	Travelers (Standard Fire)	n/a	5.2%	6.19%	Gaining in latest data
8	Liberty Mutual	8.2%	5.3%	4.98%	Structural decline; Safeco brand retired Apr 2026
9	USAA	n/a	4.1%	4.29%	Slow drift up; carve-out segment
10	Amica	n/a	3.0%	3.02%	Flat; preferred-segment specialist

Sources: CAR exposure data via Agency Checklists [4][5][12][13]. The Dec 2024 column is the full-year CAR reading (2nd Look 2025 report); because CAR shares are cumulative year-to-date, partial-year readings are not comparable across months — Progressive, for example, read 11.65% in the April 2025 partial-year data while its full-year 2024 share was 9.8%. Premium-basis cross-check (NAIC 2024): MAPFRE \$1.326B / 17.96%, GEICO 13.5%, Progressive 10.6%, Safety 8.6%, Plymouth Rock 8.6% [1]. Note that Progressive's exposure share (12.2%) runs ahead of its premium share (10.6%): its book skews to newer, lower-premium risks it is still earning into, so **its premium share rises mechanically even if it stops adding units**.

Three readings of the table matter more than the table itself:

- **The share transfer is a single story.** Commerce ceded ~4 points since 2020 (22.1% → 18.33%); Progressive gained ~7 (5.1% → 12.17%) [4][13]. Essentially all of MAPFRE's loss maps to Progressive's rise — and because Progressive has appointed Massachusetts independent agents continuously since 2014 and Agency Checklists attributes its 2025 gains to "policy acquisition momentum through its agency network and digital platforms" [12], much of that transfer happened **inside MAPFRE's own distribution channel**. MAPFRE is not losing to fellow agent carriers; the three MA-domiciled regionals (Safety, Plymouth Rock, Arbella) collectively held a stable ~24.3% [4].

- **The bleed stopped.** Commerce held an 18.1–18.3% band through 2025 and slightly gained in the February 2026 data [5][13] — the first stabilization since the erosion began (from ~28% in 2012 to 22.1% in 2020 to 18.33% today, per the engagement market brief and CAR series). This coincides with the completion of MAPFRE's margin repair (North America combined ratio 105.4% in 2023 → 95.4% in 2025, auto 97.8%, on >29% of cumulative rate) [14]: the share loss was the price of the turnaround, paid in full.
- **The attackers' momentum is unevenly distributed.** The newest CAR data show Safety, Plymouth Rock and Arbella all giving back share as their post-loss repricing (Safety ran a 107.7% combined ratio in 2023, 101.1% in 2024; Plymouth Rock group 100.4% in 2024) earns through their books [5][15][16] — while Commerce, already at a 97.8% auto combined ratio, can hold rate. For the first time since 2020, the price gap is opening in MAPFRE's favor within the agency channel.

Regulation: the rules are structurally rigged for a local incumbent that executes — and neutral on everything MAPFRE has failed to build

Since April 2008 Massachusetts has run "managed competition": file-and-use rating with a disapproval backstop, judged on overall adequacy rather than line-item review [17]. Rate adequacy is demonstrably achievable — the DOI approved >12% average increases in 2023 [2] — so the binding constraint is not *whether* carriers can earn an adequate rate but *how* they can segment. There, 211 CMR 79.04 bans more rating variables than almost any state: **credit, age (except a mandatory 65+ discount), sex, marital status, occupation, income, education, and homeownership are all prohibited** — for rating, underwriting, and tiering alike [18]. Four features of this regime define the competitive battlefield:

- **The national carriers' biggest weapons are confiscated at the border.** Progressive's and GEICO's segmentation engines rest heavily on credit-based scores and demographic micro-segments in other states; none of that toolkit works in Massachusetts. What remains is driving record, years licensed, territory, vehicle/usage — and **telematics, the only high-dimensional pricing signal the law permits** [18]. That Progressive nearly tripled its share anyway, despite the handicap, tells you the fight has moved to telematics, expense ratio, and distribution technology — all buildable positions, none of them law.
- **Group marketing deviations (G.L. c.175 §193R) are the one regulator-sanctioned headline price advantage.** Commerce holds the largest group-deviation franchise in the state (280 approved groups); Progressive holds **zero**, GEICO eight [19][20]. The >\$200M AAA Northeast joint marketing agreement — the largest single affinity franchise in Massachusetts — expires December 31, 2026 and is already in litigation (injunction denied February 3, 2026) [21][22]; its endgame is treated as a strategic pillar in this document, but the deviation *machinery* itself is durable and DOI-blessed annually. One honest caveat: §193R filings are open to any carrier — Progressive's zero is a choice, reversible with routine DOI filings — so the advantage is scale, incumbency and first-mover position (280 groups and the anchor sponsor relationships, against a 12–24 month replication lag for any entrant), not statutory exclusion.
- **The MAIP credit system is a permanent tax MAPFRE currently pays and competitors harvest.** The residual market is small (1.7% of the market, PY2025) but its burden is uneven: Commerce carries **30.4% of all MAIP assignments against an 18.1% voluntary share — roughly 1.7x its fair share —** because

competitors offset quotas with credits earned writing voluntary business in 11 designated urban territories [23]. The DOI refused credit phase-outs in 2016 and 2019 and CAR's committees reaffirmed the structure in 2025–26 [24]; the system must be planned as permanent. It is simultaneously a \$3–9M/yr drag (assumption range; no public MAIP loss ratios exist) and a ~\$1.36B/yr credit pool that rewards whoever writes urban voluntary business — today, mostly MAPFRE's competitors.

- **Nothing in Massachusetts law prevents online binding.** Carriers with direct channels (Progressive plus GEICO, ~23.5% of exposures — though Progressive's share splits across both channels) already sell bind-online in the state [4][17]. MAPFRE's quote-but-cannot-bind website is a company capability gap, not a regulatory constraint.

The 2026–27 regulatory horizon is severity-side, not rate-suppression: auto-body labor-rate floor bills (\$55/hr proposals against ~\$46–49/hr insurer-paid averages) would add an industry-wide, rate-recoverable ~\$22–36 of annual loss cost per vehicle, or ~1.8–2.9% of average premium, if enacted [25]; the MA Data Privacy Act (in House–Senate reconciliation) will force any telematics program to be opt-in, first-party, and privacy-native [26] — arguably favoring a late (re)builder over incumbents with legacy data practices; and no pending initiative would loosen the rating-factor bans. **The moat holds through the plan period. But the moat protects the incumbent's position, not its inertia — Progressive's seven points prove it buys time, not safety.**

Competitor postures: every relevant competitor is disrupted, repricing, or distracted — simultaneously

Competitor positioning summary (as of July 2026)

Competitor	Share (Dec 2025)	Posture	Trajectory & 2026–27 outlook	What it means for MAPFRE
Progressive	12.17%	Offense, both channels: #1 IA auto writer nationally + heaviest direct advertiser (~\$3.5B in 2024) [27]; Snapshot telematics live in MA; UBI its single most predictive variable	Exposure share > premium share → gains keep compounding; the structural winner	The main enemy — and it fights from inside MAPFRE's own agencies. But zero group deviations, no MA home machine at scale, no urban in-language franchise
GEICO	11.50%	Rebuilding: shed ~5 MA points since 2022 during national retrenchment; now re-armed — ad spend +67% to ~\$1.4B (2024), 81.5% combined ratio, DriveEasy live in MA [28][29]	Expect a much more dangerous price competitor by 2027	Its defectors are recruitable via agents <i>now</i> ; its weapons (price + media) never touch the agent-side battlefield
Safety	9.30%	The agent-loyalty benchmark: loss-ratio incentive commissions, tiered clubs, #1-or-#2 in >70% of its agencies [15]	Slipping in latest CAR data as +20.4% (2024) repricing earns in; CR 107.7% → 101.1% → 99.0% (2025) [5][15]	The most credible matcher of any agent-compensation move; half MAPFRE's scale

Competitor	Share (Dec 2025)	Posture	Trajectory & 2026–27 outlook	What it means for MAPFRE
Plymouth Rock	7.88%	Closest structural analog: \$1.3B IA group (+23% in 2024) plus telematics-priced direct book; hired a 37-year GEICO veteran to run Direct (Jan 2025); DriveSavely up to ~30% advertised savings [16][30]	Modest MA gains; management attention split across NY/PA expansion and the direct build	Proves the hybrid direct-to-agent model works in MA — a template to copy, and a rival for the same agents
Arbella	7.08%	Local-service positioning; corrective rate 2023–24; engagement-only telematics app	Flat-to-down; still filing increases	Share donor at the margin; competes on community affinity, not price
Liberty Mutual	4.98%	Retreat: national personal-lines pullback; retired the Safeco brand April 25, 2026, folding a 22,000-agency IA franchise under a direct-associated brand [31]	Continued decline; documented agent distrust; no competitor had launched a recruiting campaign as of July 2026	The single largest recruitable pool of agent relationships in a decade — a perishable window
MCIC (AAA Northeast)	~0% (no measurable MA share through Feb 2026) [5]	Insurgent: AAA's co-owned replacement carrier, cedes 100% to the ACE pool (AM Best A+); cut MA rates effective Jan 1, 2026; building an RI operations center	Migration of the >\$200M AAA-sourced book concentrates in January 2027+ renewals [21][22]	The most certain single threat in the plan: a named counterparty, a dated renewal wall, a subsidized price
Travelers / USAA / Amica	6.2% / 4.3% / 3.0%	Travelers gaining quietly through agents; USAA a military carve-out; Amica the preferred-segment service leader	Stable-to-up	Second-order; Amica sets the customer-experience bar (J.D. Power regional leader at 735; MAPFRE's six-year record is bottom-tier — see the Situation Assessment) [32]

Two cross-cutting observations sharpen the picture. First, **telematics is table stakes everywhere but Webster:** Snapshot, DriveEasy, Drive with Safety, and Plymouth Rock's and Arbella's CMT-powered programs are all live, while MAPFRE's MotionSmart discount has shrunk to "up to 2%" — below every visible competitor benchmark, in the one state where telematics is the only permitted high-dimensional pricing lever [19][33]. Second, **bundling is the regionals' retention moat:** Safety (#3 in MA home) and Plymouth Rock (@Home paired with auto) use property to lock in auto customers, exactly the defense MAPFRE — #1 in MA homeowners at 10.62%, barely half its auto share — has underexploited [15][16][34].

The threat picture: three attackers on different clocks, and a window that closes from both ends

The competitive threat decomposes into three distinct mechanisms, each with its own timetable:

1. Progressive: the structural attacker, inside the channel (continuous). Progressive's seven-point rise is the system-level threat: dual-channel distribution, the deepest telematics dataset in the industry, and agent-desktop tooling (real-time quoting, fast issuance) that made it the default second quote in MAPFRE's own agencies. Its exposure-share lead over its premium share guarantees further premium-share gains at zero effort. At the raw 2020–25 trajectories (Commerce –0.75 pt/yr, Progressive +1.4 pt/yr), MAPFRE's ~6-point lead halves in roughly two years; even against a stabilized Commerce share, Progressive's current pace alone halves it within roughly four. What Progressive cannot do quickly or cheaply: replicate a 280-group deviation franchise (open to it by filing, but a 12–24 month group-by-group build against the incumbent's anchor relationships), stand up a #1 Massachusetts homeowners bundle machine, or justify building Portuguese-language urban claims operations for one state [19] [34]. The fight against Progressive is won on ground it cannot occupy inside the plan window — not on ground it already owns.

2. MCIC and the AAA renewal wall: the dated attacker (January 2027). AAA Northeast's replacement carrier launched January 1, 2026 with sharply cut MA rates and ACE-pool subsidy behind it, yet shows no measurable MA share and no MA quote path through February 2026 [5][21][22]. The >\$200M AAA-sourced book — roughly 2–2.3 points of MA auto share, on the ~75–85% MA-auto composition assumption stated in the Financial Business Case — therefore migrates, if it migrates, at the January 2027+ renewal wall. This is the rare threat with a name, a date, and a defense window that is open *now* and closes at year-end. Passive runoff retains an estimated 25–30% of the book; the delta between passive and managed retention is the largest defended-premium item in this plan (Pillar 2).

3. GEICO's re-arm and the direct-writer encroachment (2027+). Carriers with direct channels (Progressive plus GEICO) already hold ~23.5% of MA exposures [12] — Progressive's portion split across both channels — and the record 47.1% shopping rate plus the minimum-limits repricing wave feeds their funnels daily [8][9]. GEICO's Massachusetts weakness is temporary — nationally it is running its best underwriting in 18 years on a rebuilt tech stack with a 67% larger ad budget [28][29] — so 2026–27 is the last cheap window to consolidate GEICO defectors through agents before its reacceleration reaches the state. MAPFRE's own website compounds the encroachment: a quote page that cannot bind converts MAPFRE brand demand into competitors' bound policies during the heaviest shopping activity ever recorded. That leak is self-inflicted and closable at will.

Set against these attackers, the defenders' side of the ledger is unusually favorable — briefly. Safety, Plymouth Rock, and Arbella are still filing increases into 2026 after 100–108% combined ratios while Commerce holds a 97.8% auto CR and can stand still on rate [5][14][15][16]; Liberty's Safeco retirement has left 22,000 agencies unanchored with no competitor yet recruiting [31]; and Plymouth Rock's management attention is split across a multi-state expansion and a direct-channel build. The disruption is not universal — Progressive is the attacker, not distracted, and Safety (+7.2% DWP in 2025) and Plymouth Rock's IA group (+23% in 2024) kept growing through their repricing — but it is broad: the three regionals are still filing corrective rate, Liberty is in brand retreat, GEICO is rebuilding, and AAA's replacement carrier is not yet operational in Massachusetts. **That alignment is the empirical basis for the 12–24 month window this strategy is built around — and none of its components recurs: the AAA wall passes, the Safeco mourning ends, the regionals finish earning in their rate, and GEICO comes back.** One clarification on how the window works: it governs *positioning* moves — the AAA book, the Safeco agencies, the CAR seat, the group and telematics filings, the platform agreements — whose acquired positions then compound through 2028–31. The window is when the assets are cheap, not when the premium lands.

4. Customers & Distribution

Massachusetts hands MAPFRE a customer base and a distribution system that no competitor can replicate — and both are moving. The customer pool is static in aggregate but growing rapidly in two segments MAPFRE does not deliberately serve; shopping behavior is at all-time records exactly when MAPFRE's book is most exposed; and the independent-agent channel that carries essentially all of MAPFRE's premium now re-awards shelf space quarterly, on criteria where MAPFRE is behind. This chapter lays out the customer and channel facts the four pillars are built on; pillar references (1a–4c) follow the numbering of The Recommended Strategy.

All net customer growth sits in two segments MAPFRE is not organized to win

Massachusetts is a slow-growth, aging state whose entire net population growth now depends on international immigration. The state added only ~15,500 residents (+0.2%) in the year to June 2025, as net international migration halved from 78,000 to 40,000 and 33,000 residents left for other states [1]. Strip out immigrants and Massachusetts shrinks. The insurable-exposure pool is flat-to-shrinking; organic policy-count growth for the market as a whole is approximately zero.

Growth is therefore concentrated, and it is concentrated where MAPFRE has never deliberately competed:

Growth segment	Scale	Why it matters to MAPFRE
Hispanic/Latino residents	14.0% of MA (~1.0M); ~8 of 10 net new MA residents 2014–23; median age 31.2 vs. 41.4 non-Hispanic [1][2]	This is where new drivers come from. Concentrated in Hampden (28%), Essex (25.7%), Suffolk (24.1%) — i.e., in the 11 DOI credit territories where every voluntary car year also earns ~\$2,900 of MAIP credit offset (see Market & Competitive Landscape, regulation section)
Brazilian community	~140K official, plausibly ~2x with undocumented residents; largest MA immigrant group since 2010; 84% working-age [3]	Portuguese-speaking — invisible to every carrier's "Hispanic" playbook. Framingham–Everett–Malden–Worcester corridor. Owned by no carrier
Seniors (65+)	18.7% of population; every MA county at its all-time-high 65+ share in 2024 [1]	The legacy book — but now also the fastest-growing shopper cohort (+11% YoY shopping growth) [4]

Two facts sharpen the opportunity. First, MAPFRE's Latin brand is a real but unexercised option: the parent is the largest multinational insurer in Latin America, operates at scale in both Puerto Rico and Brazil, and Puerto Ricans are the largest Latino origin group in Boston (28%) and dominant in Springfield/Holyoke [2][5] — the most direct brand bridge available. The 2014 California kiosk experiment proved intent, not the model, and was abandoned in the 2017 profitability retrenchment; no systematic activation in Massachusetts has ever been attempted [5]. Second, translation alone fails: ~40% of Spanish-dominant consumers will only make high-value purchases with native-

language information and support end-to-end, and the winning playbook runs through bilingual community agents, not anonymous digital funnels [6]. That is why the strategy's urban franchise (Pillar 3b) is built on Latino- and Brazilian-owned agency recruitment and full Spanish **and Portuguese** sales/service/claims — pilot-gated, because the trilingual talent build is the genuine cost in the plan.

The tail risk is symmetric: MA population growth is now a single-factor bet on immigration, which halved in 2025 under federal enforcement policy [1]. If that persists, share capture from competitors — not segment growth — carries even more of the plan, which is exactly how the pillars are weighted.

Customers are shopping at all-time records — and the July 2025 repricing put MAPFRE's own book in motion

Every measure of customer mobility is at a record, and the trend runs against carriers with weak digital funnels and chronic claims-experience scores:

Behavior metric	Value	As of
In-force policies shopped in past 12 months	47.1% (all-time high)	Q4 2025 [4]
Quarterly switch rate	4.5% (all-time high)	Q3 2025 [7]
U.S. carrier retention	78%, down 5 pts since 2021	YE 2024 [8]
New-business growth: direct channel	+12.6% YoY	Q4 2025 [4]
New-business growth: independent agents	-0.1% YoY (first negative reading since Q1 2024)	Q4 2025 [4]
Auto shoppers buying through digital channels	47% (vs. 35% agents, 17% call centers)	2025 [9]
Shopping growth, 66+ cohort	+11% YoY — fastest of any cohort	Q4 2025 [4]
Shopping growth, 10+ year tenured customers	+35% YoY	2024–25 [4][8]

Three implications follow. First, **loyalty segments are gone as a passive asset**. Seniors and long-tenured customers — the core of MAPFRE's legacy book — are now the fastest-growing shopper cohorts. Inertia-held share is unstable share; that is the premise of the retention architecture across Pillars 2 (bundle) and 4 (claims experience).

Second, **Massachusetts-specific shocks amplified the national trend at the worst possible moment**. Cumulative MA auto rates rose ~38% from 2022 through late 2024 [10], and the July 1, 2025 minimum-limits increase (20/40/5 to 25/50/30 — the first change since 1988) raised average minimum-coverage premiums an estimated ~36%, from ~\$524 to ~\$711 [11]. Rate shock is the most reliable shopping trigger in the industry; a disproportionate share of minimum-limits customers sit in the urban territories where MAPFRE's voluntary presence is thinnest and its MAIP burden heaviest.

Third, **shopping converts where MAPFRE is absent**. With 47% of buyers closing digitally [9] and MAPFRE running a quote page that cannot bind, record shopping volume is a one-way valve: MAPFRE's brand demand leaks into competitors' funnels, and none flows back. MAPFRE is also entirely absent from online comparison-site quote tables — its street price is invisible to digital shoppers [12]. The customer-experience flank compounds the

exposure: MAPFRE's six-year bottom-tier J.D. Power record (detailed in the Situation Assessment) [13] sits on a book whose claimants are its most shop-prone customers. The fixes are Pillars 3c (bind-online, agent-assigned) and 4b (the claims operating-model repair).

Vehicle technology is repricing the book: severity, ADAS, and the EV transition

The loss-cost story customers bring through the door is severity, not frequency:

- **ADAS calibrations appeared on 23% of repairable appraisals in 2025, up from 0.9% in 2017**; average repair cost reached \$4,768, driven by vehicle-technology complexity rather than macro inflation [14]. Bodily-injury severity rose 9.2% in 2024; distracted-driving violations rose 50% nationally [8].
- **EV adoption is real but behind plan**: 166,296 light-duty EVs on MA roads at end-2025 versus a 200,000 state target, with adoption plateauing after the federal credit was rescinded [15]. Drivers switching to EVs show ~14% higher claim frequency in their first EV year, and EV repairs skew to higher severity [8].

Two consequences. For pricing: frequency-based rate adequacy erodes as the fleet's severity mix shifts — one more reason telematics (the only high-dimensional pricing lever MA law permits) matters. For claims: calibration capability, DRP depth, and repair cycle time become quiet competitive weapons — repair cycle time is the industry's proven retention lever (industry average improved to 19.3 days from 22.3) [16], and MAPFRE holds one of three insurer seats on the state's labor-rate Advisory Board. Pillar 4a repositions the DRP network for exactly this ADAS/labor-rate era.

The agent channel is the fortress wall — but shelf space is now re-earned every renewal, on criteria MAPFRE currently fails

Massachusetts is the most independent-agent-penetrated state in America: **78.8% of P&C premium flowed through IAs in 2024**, the structural foundation of an 18.33%-share agency-only franchise [17]. But the channel's loyalty mechanics have been rebuilt underneath MAPFRE, and the December 2025 CAR table shows the result: Commerce fell from 22.1% (2020) to 18.33%, while Progressive — attacking through MAPFRE's own agents as well as direct — rose from 5.1% to 12.17% [18]. Essentially all of MAPFRE's share loss went to a carrier that pays agents *and* out-executes on technology.

What agents actually reward. The research is unusually convergent, and it has changed:

What agents say decides carrier selection	Evidence
Real-time appetite/quoting in the agent's own systems	#1 selection factor at 29%, up from 12% in one year (IVANS 2025); 83% of agents would write more business with carriers providing it in-AMS [19][20]
Ease of doing business	Only 40% of personal-lines agents call carriers easy to work with; satisfaction runs 274 points higher (1,000-pt scale) when "very easy"; Erie (754), Auto-Owners, Hanover set the bar [21]

What agents say decides carrier selection	Evidence
Market commitment	#1 agency challenge: "carriers that will maintain their commitment to their market" — 56% of agencies, up from 31% in 2022 [22]
Continuous re-contest	62% of personal-lines agents proactively shop clients before renewal — shelf position is re-decided every cycle, not at appointment [23]

The rater is the storefront: an agent's CSR keys the risk once into a comparative rater and presents what returns. A carrier that is absent, slow, or inaccurate in the rater is invisible at the moment of quote. MAPFRE is connected on Vertafore PL Rating but **absent from EZLynx's Massachusetts panel** — the stack national consolidators standardize on [24]. This is the specific, fixable defect Pillar 1a closes, with a falsifiable metric: share of top-400-agency new-business quotes that include a MAPFRE rate, measured quarterly.

Compensation is the lock-in, not the hook. Personal-lines base commissions run ~8–15% with contingents adding 2–5% of premium; contingents are ~45% of the average agency's total profit [25]. Safety's architecture is the local benchmark: a loss-ratio incentive commission (historically up to 8% of premium) plus a five-tier club ladder, with top-tier agents historically earning 18% against a 13% regulated minimum [26]. Compensation buys placement priority for a known cost — but agents' own stated decision function puts price, ease, and market commitment ahead of it. Hence the plan's sequencing (enablement first) and its hard constraint: only the loss-ratio-gated version of a comp redesign ships (Pillar 1d), because an un-gated escalation is the one move Safety matches within a cycle at symmetric cost.

The plant itself is consolidating — and consolidation is a share-shift mechanism, not background noise. 695 U.S. agency deals closed in 2025 (~73% PE-backed buyers); Massachusetts saw 31, with repeat acquirers (Kaplansky/Alera, Duffy, DiVirgilio, World, Trucordia, Patriot Growth, King Risk, Hilb) rolling up MAPFRE-relevant agencies [27]. Roughly 2.3% of MAPFRE's ~1,300 MA agencies change ownership annually — ~12% over the plan horizon, ~\$150–160M of premium at risk — and post-acquisition, forty-year local relationships become branches of platforms whose placement stack is driven by centrally negotiated compensation and connectivity, not history [27][24]. Book-roll machinery is industrialized (51% of agents prioritize book-roll tooling [19]), which cuts both ways: it is how MAPFRE loses books passively, and how it wins them deliberately. Pillar 1b's consolidator platform agreements are the response — the ownership layer is the one place Progressive cannot follow.

Two perishable channel windows are open now. Liberty retired the Safeco brand on April 25, 2026, folding a ~\$14B, 22,000-agency IA franchise under a name those agents distrust — and as of July 2026 no competitor has publicly launched a recruiting campaign [28]. MAPFRE can make the one commitment Liberty cannot — the no-direct-competition pledge to agents stated in full in Strategy 1c. Simultaneously, Safety, Plymouth Rock and Arbella are still filing rate increases into late 2026 after 101–108% combined ratios, while Commerce at a 97.8% auto CR can hold rate and reopen a price gap [29]. The realistic uncontested Safeco window is 6–12 months; the repricing window 12–18. Both are why Pillar 1 launches this quarter, not next year.

The direct/digital gap is a self-inflicted funnel leak — the fix is direct-to-agent, not direct-vs-agent

The uncomfortable channel arithmetic: carriers with direct channels (Progressive plus GEICO) already hold ~23.5% of MA auto exposures — Progressive's share split across both channels — and the carrier compounding fastest runs the hybrid playbook [18][30]. Meanwhile MAPFRE's website quotes but cannot bind — during record shopping (47.1%) and a minimum-limits repricing wave, every quote it generates is a consented, warm lead handed to a competitor's funnel.

Two conclusions follow, both argued in full elsewhere so they are only stated here. First, frontal direct-to-consumer economics fail at MAPFRE's scale — the advertising arms race, channel-level combined ratios, CAC benchmarks and the insurtech failure file [30][31][32][33] are laid out in Strategic Options (Transform's objection). Second, the proven Massachusetts answer is **direct-to-agent** — Plymouth Rock's Prime mechanic, running in-state since 2015 [34][35] — which the strategy adopts at pilot scale on the existing Guidewire core [36], CAC-gated and sequenced after agent enablement (Initiative 3c). The strategic value exceeds the premium: the bind rail is the delivery mechanism for AAA re-anchoring offers, group digital enrollment, in-language purchase for the Hispanic/Brazilian franchise, and telematics-at-quote — and closing MAPFRE's own funnel leak is value no competitor can compete away.

Telematics is the customer-segmentation lever the law permits — and MAPFRE has voluntarily disarmed it

The 211 CMR 79.04 rating-factor bans (enumerated in Market & Competitive Landscape) neutralize national carriers' biggest segmentation weapons and leave telematics as effectively the only high-dimensional pricing frontier [37] — and every major MA competitor runs an approved program, with the carrier that took MAPFRE's share calling UBI its single most predictive rating variable at more than 3x the next best [38]. MAPFRE's own program has gone backwards: MotionSmart's advertised discount decayed from up to 10%/20% at its July 2021 launch to "up to 2%" today, below every visible competitor benchmark [39]. The assets to fix it are in place — CMT is already MAPFRE's vendor, the DOI's revealed tolerance accommodates a symmetric structure, and consumer willingness (60% open to UBI [40]) far exceeds enrollment; the prescription — the symmetric refiling, the enrollment engineering an agency channel requires (Allstate's 30–40% new-business penetration is the proven benchmark [41]), and the built-in kill trigger — is Initiative 3a in The Recommended Strategy.

What the customer and channel facts require of the strategy

Fact base finding	Strategic consequence	Pillar
Real-time appetite is agents' #1 selection factor; MAPFRE absent from EZLynx; 62% of agents re-shop clients every renewal	Win the rater/API layer or lose invisibly, quarterly	1a
~12% of the agency plant changes ownership over the plan; ~\$150–160M at risk; book-roll machinery industrialized	Treat consolidators as named accounts with change-of-control-surviving agreements	1b

Fact base finding	Strategic consequence	Pillar
22,000 ex-Safeco agencies in brand mourning; window uncontested as of July 2026	First-mover transition desk, launched this quarter	1c
47.1% shopping, 47% buying digitally, quote-no-bind site, invisible on comparison sites	Close the funnel leak with agent-assigned bind-online, pilot-scale, CAC-gated	3c
8 of 10 net new residents are Latino; ~140K+ Brazilians owned by no carrier; in-language must be end-to-end	Trilingual urban franchise, pilot-first, built on bilingual community agencies	3b
Telematics is the only permitted segmentation lever; MotionSmart at 2% vs. DriveSavely's 10%/±20%	Symmetric refiling at 8–10%/±20%; kill if approved discount-only	3a
Seniors and 10+ year tenured customers are the fastest-growing shoppers; bundlers retain at 95% vs. 85%; claimants shop most	Bundle offensive as retention armor; claims-experience KPIs on the executive scorecard	2c, 4b
ADAS calibrations on 23% of appraisals; \$4,768 average repair; cycle time is the retention lever	DRP repositioned for the calibration era; touchless norms	4a

The through-line: MAPFRE's customer and distribution position is defensible only in motion. The agent channel rewards carriers quarterly on ease and connectivity; the growing customer segments buy in Spanish, Portuguese, and pixels; and the shopping wave will re-decide the ownership of MAPFRE's inertia-held book within 24 months whether or not MAPFRE participates in the decision.

5. Strategic Options Considered

Three lenses were built to compete, not to converge

The recommended strategy was not drafted by consensus. Three teams worked from the same 22-brief fact base and the same fact-check log, each charged with making the *strongest possible case* for a distinct strategic lens — and each required to quantify its initiatives, name its falsifiable metrics, publish an explicit "will not do" list, and state the best objection to its own thesis. A three-judge panel then scored the proposals independently on **capital efficiency** (growth dollars per invested dollar, risk-adjusted), **executability** (can this organization ship it on this timeline), and **competitive durability** (does the advantage survive a competent response). The recommendation in this document is the output of that contest: one proposal supplies the spine, and specific, named elements of the other two are grafted onto it where the judges found them superior.

	Option A: Fortress & Deepen	Option B: Channel & Digital Transformation	Option C: Expansion & Diversification
Core bet	Win more of the fights already underway: recapture MA auto share, bundle to home parity, defend AAA, harvest MAIP credits	Become the most digitally capable agent carrier in MA, then bolt on a Prime-style bind-online channel	Cut the two concentration axes: product (home, small commercial) and state (NH/ME/VT, one bolt-on acquisition)
2030–31 ambition	~\$270–375M identified premium + \$20–40M/yr CR self-help; \$450–600M+ swing vs. drift	Share ≥19.5% by YE2029; digital origination ≥4% of new business; ~\$70–100M direct book by year 5	+\$500–650M new/defended DWP; MA personal auto from ~51% to ~40–43% of US book
Investment ask	~\$70–120M / 3 years	~\$70–105M / 5 years	~\$130–260M / 5 years (incl. \$50–150M acquisition)
Signature exclusions	No new states, no greenfield direct, no M&A, no MAIP advocacy	No national DTC assault, no web rate on the agency entity, no core replatforming	No NY/NJ, no standalone workers' comp, no Verti relaunch

Two-thirds of the content overlapped — all three teams independently converged on the AAA retention offensive, the Safeco transition desk, agent rater/API enablement, a symmetric MotionSmart refiling, the Plymouth Rock-pattern bind-online design, and claims-economics self-help. That convergence is itself a finding: these moves are robust to the choice of lens and appear in the recommended strategy unconditionally. The genuine disagreements — where the money goes at the margin, how fast direct scales, whether new states and acquisitions belong in the plan at all — are what the judges adjudicated, and they are the subject of this chapter.

Option A — Fortress & Deepen: the arithmetic of home-market density won on all three panels

The strongest case. One point of Massachusetts private passenger auto share is ~\$74M of annual premium on a \$7.381B market [1] — winnable through ~1,300 agents already under contract, at rates already filed, on a Guidewire core live since 2020 [2]. The best expansion alternative anyone proposed (New Hampshire at a heroic 4% share) is worth ~\$49M after a five-year, from-scratch campaign [3]. The homeowners-parity prize (~\$275M of annual premium at auto-share parity) sits entirely with agents already appointed, in a line where MAPFRE ran a 30.0% loss ratio in 2024 [4]. The share loss that must be reversed — 22.1% to 18.33% of exposures, 2020 to Dec 2025, essentially all of it transferred to Progressive (5.1% → 12.17%) [5] — is a distribution-technology story, not a price-level story, and the margin repair that funds the response is complete (North America CR 105.4% → 95.4%, 2023 → 2025, record €139M result) [6]. Fortress also uniquely framed the ask the way Madrid decides: redeploy roughly one-third to one-half of the \$246.7M of dividends Commerce exported through its loss-and-recovery years (2019–23) [7], hold the CR at a ~95–96% U.S. bar, zero new-state capital, zero M&A.

The strongest objection, taken seriously. Fortress Massachusetts risks polishing a melting ice cube: a flat-exposure state, an aging population, an AM Best standalone assessment of "marginal operating performance" that leans on Madrid [8], and a plan with no Plan B if Progressive — structurally advantaged in brand, telematics data, and dual-channel economics — simply keeps winning. Spending ~\$100M to deepen the very concentration rating agencies penalize is not obviously prudent.

The judges' conclusion. Fortress scored highest on all three panels — capital efficiency 86, executability 84, competitive durability 84 — and its answer to the concentration objection was decisive: MAPFRE's fragility is not that it is *in* Massachusetts (structurally one of the better auto states: 62.2% statewide loss ratio in 2024 [9]; rating-factor bans that neutralize national carriers' segmentation weapons [10]); it is that it is *monoline auto with a shallow moat inside the state* — under-bundled, under-telematic, claims-weak, dependent on one affinity partner. The Fortress initiatives attack exactly those axes, which is what improves the standalone AM Best profile; a subscale second state does not. The panel also credited two disciplines the other proposals lacked in places: defended premium never counted as growth, and every initiative carrying a dated, falsifiable tripwire. Its weaknesses — a thinner treatment of commercial lines and no answer on the strategically orphaned West Coast block — were repairable by graft.

Option B — Channel & Digital Transformation: right diagnosis, one disqualifying omission, one killed forecast

The strongest case. Transform's diagnosis is the sharpest single sentence in the engagement: MAPFRE is not being beaten on price, product, or capital — it is being beaten on distribution technology, by a competitor that attacks through MAPFRE's own agents *and* through a direct channel MAPFRE does not have. The evidence is uncomfortable and specific: real-time in-AMS appetite is now agents' #1 carrier-selection factor (29%, up from 12%), 83% of agents say they would write more with it, and MAPFRE is absent from EZLynx's Massachusetts panel — the rater stack national consolidators standardize on [11][12]. Meanwhile the quote-but-no-bind website

converts MAPFRE brand demand into Progressive and GEICO policies during record shopping (47.1% of policies shopped in 12 months) and a minimum-limits repricing wave [13]. Transform's channel-conflict engineering was the best in the engagement: bind online at existing filed rates, every policy assigned to a local agent for a one-time fee with full commission and lifetime ownership (the Plymouth Rock mechanic, running in Massachusetts since October 2015 [14]); owned traffic first; aggregator buys capped at calibration size; scale only where measured CAC beats the \$500–900/bound-policy benchmark [14]; the Citation/American Commerce paired-entity filing held in reserve. Its claims diagnosis — that the constraint is operating model, not software, in an organization that fielded ePICS, One Inc, and Shift without moving a six-year bottom-tier J.D. Power record (detailed in the Situation Assessment) [15] — survives intact into Pillar 4.

The strongest objection, taken seriously. Direct is a decade-long money pit and a channel-conflict grenade: Plymouth Rock's own Core Direct reached only ~\$110M after ten years [14], Progressive's direct channel runs 4.6 CR points worse than its agency channel even at scale (89.6 vs. 85.0, YTD Sept 2025) [16], and every dollar spent on bind-online is a dollar not spent on the agent war MAPFRE is actually losing.

The judges' conclusion. Two findings ended Transform's candidacy as the spine. First, the omission of homeowners was disqualifying on capital efficiency: a channel strategy that ignores the single cheapest growth pool in the franchise (~\$275M parity gap, 30.0% loss ratio, 95%-vs-85% bundled retention [4][17]) optimizes the pipe while leaving the highest-margin product off the shelf — and forfeits the retention armor that makes recaptured share durable. Second, **all three judges killed the year-5 direct scale forecast** (40–55K policies, \$70–100M): it extrapolated past Plymouth Rock's decade of documented experience on the strength of brand-share assumptions no MA precedent supports. What survives is the pilot (10K policies, ~\$17–20M premium, \$5–9M spend, partially offset by agent fees) and a 15–25K steady state — with measured CAC and channel loss ratio, not the deck, authorizing anything more. The durable verdict on Transform: the best *how* in the engagement, attached to an incomplete *what*.

Option C — Expansion & Diversification: the correct anxiety, the wrong prescription — and three grafts the spine needed

The strongest case. Expand made the concentration argument with rigor the other teams lacked, correcting the client's own framing: ~75–80% of US premium is Massachusetts *all-lines*, but MA personal auto alone is ~51% — two axes, requiring different treatments [18]. Its failure file is real (Merced insolvent within a month of the Camp Fire; twelve Louisiana insurers, 2021–23; Fireman's Fund's renewal rights sold at ~26 cents per premium dollar [19]), and its warning is legitimate: AM Best explicitly subsidizes the US rating with Madrid's diversification [8]. Its program was disciplined by expansion standards — contiguous states only, no new licenses, distribution-led, one "complementary single-state" acquisition squarely inside Madrid's stated M&A frame, with kill gates throughout. And it was the only team that caught two board-level facts: the **CAR commercial servicing-carrier appointment** (one of four seats, five-year term expiring 12/31/2026, RFP imminent) [20], and the ~4.5% YoY shrinkage of Commerce's #1 MA commercial-auto line while the market grew ~3% and Arbella grew ~14% [20].

The strongest objection, taken seriously. This is the same company that expanded, failed, and amputated (2017–2022: five state exits, Florida runoff, Verti USA's silent death), told investors in Feb 2020 it wanted *more* exits — a record every recruited agent can discover — and whose parent said in February 2026 it is "not planning to broaden our footprint" [21]. Diversification for a carrier without a demonstrated operating edge is diversified mediocrity.

The judges' conclusion. The expansion core failed on capital efficiency and executability. The entire New Hampshire prize at a heroic 4% share (~\$49M) is two-thirds of one Massachusetts share point winnable at marginal cost — fought against Safety and Plymouth Rock on shelves they own, with guaranteed profit-sharing floors the panel scored as an unpriced contingent liability [3]. The \$50–300M bolt-on was priced off a distressed 2015 comp no 2026 seller will honor, was silent on ~\$100M+ of supporting surplus (true ask \$150–250M), and ran 2–3x Madrid's demonstrated ~\$95M bolt-on appetite [21] — buying premium is not growth, and the panel refused to book it. The ACMIC-template equity JV pitch split the panel — two judges killed it, one grafted it — and the kill was honored on the evidence: the live precedent required a Q4-2025 capital call and spent months under AM Best review with negative implications before its December 2025 affirmation; conceding equity is the tax currently bleeding MAPFRE, not a strategy [8]. But three Expand elements scored above their Fortress and Transform equivalents and were grafted whole: the CAR reappointment bid, the 90-day commercial-auto leak diagnosis before any commercial investment, and the West Coast hold/fix/sell review — the last converting a strategically orphaned CA/OR/AZ block into a capital-release option that could offset a substantial share of the Massachusetts program's cost (the block's premium and allocated surplus are a data-room item).

The verdict, and what the recommended strategy takes from each

The panel's synthesis logic is worth stating plainly, because it is the answer to the question a skeptical reader should ask: *if Fortress won, why does the final strategy contain a direct channel, a commercial-lines workstream, and a divestment review?*

Fortress supplies the spine — the thesis (density beats every alternative by an order of magnitude), the Madrid framing (dividend redeployment, CR guardrail, zero new states, zero M&A), the arithmetic discipline (defended $\neq$ growth; every initiative dated and falsifiable), and the earn-the-right gate: only if YE2028 lands on the modeled trajectory (auto $\geq 18.6\%$ and rising, home $\geq 11.7\%$ with attach $\geq 40\%$, CR $\leq 96\%$ — checkpoints on the path to $\geq 19\%$ auto and $\sim 13\%$ home by 2030–31) does the diversification conversation reopen — at which point a bind-capable platform, repaired claims economics, and a scaled telematics program make any later adjacency dramatically cheaper. Deepening first is what makes expanding later affordable.

Transform supplies the how: the bind-online design with its channel-conflict guardrails kept verbatim, the sequencing rule (agent enablement visibly first, bind later), the CAC gates, the paired-entity reserve, the falsifiable-metrics governance scaffold, and the claims operating-model fix — claims-experience KPIs on the same executive scorecard as the combined ratio.

Expand supplies the corrections: the CAR seat (one of only two hard 12/31/2026 deadlines in the plan), the commercial-auto diagnosis, the West Coast review, and the two-axis concentration decomposition used in the Financial Business Case. Its deeper contribution is negative and permanent: by making the best possible case for

expansion and still losing on the arithmetic, it converted "no new states this cycle" from an instinct into a tested conclusion.

Where the judges split, the resolutions are recorded in the plan as standing constraints: club partnerships survive only in non-equity form; the home ambition holds at Fortress's +2.5 points (to ~13%) with full parity named as post-2030 upside; the urban/trilingual program is pilot-gated per the executability judge (2–3 territories, ~3,000 voluntary car years by mid-2028, budget raised to \$10–18M for the genuine bilingual-talent build); the coastal tranche takes the stricter \$30–40M cap.

The road not taken — killed on the merits, kept killed by design

The table below records the options where the judges genuinely debated before killing — with the deciding fact in each case. The full standing-constraint register (ten items, board-resolution language) appears in The Recommended Strategy under "What MAPFRE will NOT do"; it exists precisely so that killed initiatives cannot re-enter through workstreams, because the panel judged management bandwidth, not capital, to be the program's scarcest resource.

Rejected option	Proposed by	Deciding fact
NH/ME/VT agency build-outs; CT fix-then-grow	Expand	Whole NH prize at 4% ≈ \$49M — two-thirds of one MA point at marginal cost, against incumbents who own the shelves [1][3]; profit-sharing floors an unpriced contingent liability
\$50–300M single-state bolt-on	Expand	Priced off Fireman's Fund's distressed 26¢ comp [19]; true capital ask \$150–250M vs. Madrid's ~\$95M demonstrated appetite [21]; demoted to unfunded opportunistic screen
Equity/ACMIC-template club JV	Expand (split panel, 2–1 kill)	Live precedent required a Q4-2025 capital call and months under AM Best review with negative implications before its Dec 2025 affirmation [8]; non-equity second-carrier slot survives as settlement architecture only
Year-5 direct scale case (\$70–100M)	Transform	Killed by all three judges; 10x Plymouth Rock's documented decade [14]; pilot + 15–25K steady state funded, CAC-gated tranches thereafter
Inorganic BOP/CMP acceleration (\$20–40M)	Expand	Scale/STP arms race: carriers >\$2.5B took 12 share points in six years; Safety needed two decades to reach ~\$32M of BOP [20]

The remaining kills — NY/NJ re-entry, a greenfield direct brand or Verti relaunch, standalone workers' comp, un-gated commission escalation, scale aggregator buying, further MAIP credit advocacy, and West Coast growth capital or drift — were screened out by all three teams or self-rejected by their proposers; each appears with its deciding fact in the standing-constraint register [14][20][21][22][23].

The pattern across the kill list is consistent: every rejected option either bought growth at a multiple of the cost of the next Massachusetts dollar, or bet the program's scarcest resource — executive attention in an organization that has shipped no growth-side or agent-facing capability on its modern core in six years — on fights outside MAPFRE's structural advantages. The recommended strategy spends both dollars and attention where the arithmetic, the judges, and MAPFRE's own history all point: at home.

6. The Recommended Strategy

The thesis: win more of the fights MAPFRE is already in — and do it inside a window that closes

MAPFRE's growth strategy is to convert an inertia-held #1 Massachusetts franchise into a defended, densified, digitally-armed one — during a 12–24 month window in which every major competitor is disrupted, repricing, or distracted, and after which the window does not reopen. No new states. No M&A. No greenfield brands. The entire program is executed through assets already owned: ~1,300 appointed Massachusetts agencies [18], 908,833 in-force auto exposures [1], the state's largest group-discount franchise [19], a #1 homeowners position at half its natural size [22], and a modern Guidewire core live since 2020 with no growth-side or agent-facing capability yet built on top of it [51].

The thesis rests on four facts, each verified in the fact-check log:

1. The arithmetic of home-market density beats every alternative by an order of magnitude. One point of Massachusetts private passenger auto share is ~\$74M of annual premium on a \$7.381B market [2] — winnable through agents already under contract, at rates already filed, on a platform already built. The best expansion alternative anyone proposed — New Hampshire at a heroic 4% share of its \$1.22B market [2] — is worth ~\$49M after a five-year, from-scratch campaign against Safety and Plymouth Rock on shelves they own. The full homeowners-parity prize (~\$275M of annual premium at auto-share parity [22][2]) sits with agents already appointed. There is no growth dollar available anywhere in the Northeast as cheap as the next dollar in Massachusetts.

2. The margin repair is complete — and it was paid for in share. North America went from a 105.4% combined ratio in 2023 [4] to 95.4% in 2025, a record €139M result with U.S. auto at 97.8% [3], bought with >29% of cumulative rate [4] and roughly four points of Massachusetts auto share (22.1% → 18.33%), essentially all of it transferred to Progressive (5.1% → 12.17%) — much of it through MAPFRE's own agents [1]. The share loss is a distribution-technology and pricing-tools story, not a price-level story. For the first time in a decade MAPFRE has both the underwriting headroom and Madrid's explicit profitable-growth mandate to buy the share back.

3. The window is real, dated, and does not reopen. The four hard clocks documented in the Situation Assessment all expire inside the plan's first 18 months: the >\$200M AAA agreement (12/31/2026, migration concentrating in January 2027+ renewals [6][7][8]); the CAR commercial servicing seat (12/31/2026, RFP imminent [28][29]); the Safeco recruiting window (open now, uncontested as of July 2026, realistically 6–12 months [10][11]); and competitors' repricing cycle (Safety, Plymouth Rock and Arbella filing increases into late 2026 while Commerce at a 97.8% auto CR [3] can hold rate). The window governs when the *positions* are cheap — the book, the agencies, the seat, the filings; the premium those positions produce compounds through 2028–31.

4. MAPFRE's right to win rests on assets competitors cannot copy quickly or cheaply. Progressive has no Massachusetts homeowners machine at scale, zero §193R group deviations against Commerce's 280 — the largest franchise in the state, with the participation rule waived through 2030 [19][20][21] — and no case for building Portuguese-language claims operations for one state's urban credit territories. The deviation advantage is scale, incumbency and first-mover position, not statutory exclusion: §193R filings are open to any carrier, and the honest framing is a 12–24 month replication lag (group-by-group sponsor negotiation and filing) against an incumbent holding the anchor relationships — the plan's answer to "what if Progressive files deviations in 2027?" is set out under Initiative 2b. GEICO's only weapon — price plus \$1.4B of national media — touches none of the agent-side battlefield in the most IA-penetrated state in America (78.8% of P&C premium [53]). Safety and Plymouth Rock can match individual moves, but at proportionally greater cost against a carrier with double their scale and the market's largest cross-sell base. And Massachusetts' rating-factor bans (211 CMR 79.04, enumerated in the Market & Competitive Landscape) neutralize the national carriers' biggest segmentation weapons: the rules reward the local incumbent that executes.

How the strategy compounds. Each pillar arms the next. Winning the agent's desktop (Pillar 1) is the delivery rail for the AAA re-anchoring and the bundle offensive (Pillar 2); the bundle is the retention armor that makes recaptured share durable; telematics and the urban credit harvest (Pillar 3) are the only pricing and customer-pool levers Massachusetts law permits, and they run on the bind-capable digital rail; claims self-help (Pillar 4) funds the program's opex and repairs the one customer-facing weakness that makes an inertia-held #1 share unstable. By YE2028, if the trajectory gates are met — **MA auto ≥18.6% and rising for two consecutive quarters; MA home ≥11.7% with bundle attach ≥40%; combined ratio ≤96%**, checkpoints set on the modeled path to ≥19% auto and ~13% home by 2030–31 — MAPFRE will have *earned* the right to reopen the diversification conversation, with a bind-capable platform, repaired claims economics, and a telematics program that make any later adjacency dramatically cheaper. The fortress is not the alternative to expansion; it is the precondition for it.

The ask to Madrid is framed the only way Madrid decides: \$85–135M over three years (~1–1.5% of premium per year), sequenced with ~\$45–60M in year 1 — roughly one-third to one-half of the \$246.7M of dividends Commerce exported to the parent through its loss-and-recovery years of 2019–23 [5]. The recommended mechanism is a **two-to-three-year reduced-dividend agreement** — retained U.S. earnings rather than a capital injection, a materially easier conversation given Commerce's \$561–684M surplus and ~€118M annual U.S. result. The program is substantially self-funded by \$20–40M per year of claims-economics self-help (Pillar 4) and held throughout at a ~95–96% U.S. combined-ratio bar — a planning assumption to be ratified in the funding paper, since the U.S. book runs above the group's stated 93–94% 2026 target on Massachusetts mix — with zero new-state capital and zero M&A.

Every initiative below carries an owner, a budget, a horizon, its five-year premium arithmetic, and a falsifiable leading indicator. Two accounting disciplines apply throughout: impact figures are annual premium by 2030–31 at risk-adjusted midpoints unless stated, and **"defended" premium is counted separately from growth and never double-counted.**

Pillar 1 — Win the agent's desktop: shelf position, ease of doing business, and the two perishable windows

Owner: Chief Distribution Officer. Budget: \$28–42M over three years. This pillar is first, largest, and unconditional — it arms everything else.

1a. Rater ubiquity and straight-through processing (0–12 months). Ship real-time rating and appetite APIs from the existing Guidewire stack [51] into every rater Massachusetts agents and their acquirers use: harden SinglePoint and Vertafore PL Rating, **close the EZLynx gap** — MAPFRE is absent from EZLynx's Massachusetts panel [16], the stack national consolidators standardize on — plus flawless IVANS download, STP new-business issuance for clean risks, and agent-facing digital claims transparency. *Why it wins:* real-time appetite is now agents' #1 carrier-selection factor (29%, up from 12% a year earlier) [13]; 83% of agents say they would write more with real-time quoting in their AMS [14]; only 40% of personal-lines agents call their carriers easy to work with, and the satisfaction gap for "very easy" carriers is 274 points [15]. This layer is table stakes Progressive has already set — absence is fatal even though presence alone is not advantage. *Risk:* enablement achieves parity, not superiority; the metric below is the tripwire that triggers re-allocation, not escalation. *Metric:* *share of top-400-agency new-business quotes that include a MAPFRE rate, measured quarterly; live on the EZLynx MA panel by Q2 2027.*

1b. Consolidator platform agreements (0–18 months). Pre-negotiated, change-of-control-surviving platform agreements with the 10–15 acquirers rolling up MAPFRE's plant — Kaplansky/Alera, Duffy, DiVirgilio, World, Trucordia, Patriot Growth, King Risk, Hilb [17] — with Ivans Bookroll tooling and dedicated service teams. *Why it wins:* ~2.3% of MAPFRE's ~1,300 Massachusetts agencies change ownership annually (31 deals in 2025) [17][18] — roughly 12% of the plant over the plan horizon, an estimated **\$150–160M of premium at risk** (planning estimate on book-size averages). Acquired agencies migrate to their platform's standard rater stack and compensation agreements; a carrier without a platform deal inherits the runoff. The ownership layer is the one place Progressive cannot follow. *Risk:* platform deals concentrate negotiating power; mitigated by loss-ratio-gated economics (1d).

1c. The Safeco transition desk — launched this quarter. Fast-track appointments, a Bookroll-equipped book-roll team, and the one pledge Liberty cannot make and MAPFRE credibly can *today*: "we will never out-advertise you for your own customer." *Why it wins:* the pool is ~22,000 ex-Safeco agencies nationally [10]; Liberty holds ~247K Massachusetts auto exposures (4.98% and shrinking) [1] and cut U.S. Retail written premium 6.4% in 2025 [12]; documented agent sentiment mixes brand grief with distrust of Liberty's own direct channel. As of July 2026 no competitor has publicly launched a recruiting campaign — the window is open and uncontested. **This is the one initiative where a 90-day delay destroys the thesis:** the realistic uncontested window is 6–12 months before Safety or Plymouth Rock stand up their own desks. *Risk:* rolled books adversely select; underwrite book rolls at file level, not agency level. *Metric:* *ex-Safeco agency appointments and rolled exposures, reported monthly to the CEO.*

1d. Loss-ratio-gated compensation redesign (12–24 months). Tiered agent clubs on the Safety architecture — but strictly loss-ratio-gated: growth and retention kickers pay only where agency-level economics improve with the book. An un-gated commission escalation is the one move Safety matches within a single cycle at symmetric cost, leaving both carriers poorer. We will not start that arms race (see § "What MAPFRE will not do," item 7).

Pillar 1 arithmetic. Defense: ~\$150–160M of consolidation-exposed premium protected over the plan. Offense: +1.0 point of MA auto share recaptured by 2029 from Safety/Plymouth Rock/Arbella repricing slippage, Safeco disruption, and GEICO defectors ≈ **\$74M**; a 10% capture of the Safeco pool ≈ 25K exposures ≈ **\$35M**. Share-capture rates are planning estimates; the quarterly quote-stack metric is the falsifiable tripwire.

Pillar 2 — Defend and densify the book: the AAA endgame, the group machine, the bundle fortress, and the commercial-auto seat

Owners: Chief Marketing/Affinity Officer (2a, 2b); Chief Product Officer, Personal Lines (2c); President of Commercial Lines (2d). Budget: \$38–61M over three years plus priced discount costs. This pillar carries the two hardest deadlines in the plan — both December 31, 2026.

2a. The AAA retention offensive — run in 2026, before the January 2027 renewal wall. Plan as if the JMA is gone; the injunction denial makes that the base case [7]. Three moves. (i) A retention task force on the ~\$200M AAA-sourced book [6] (~100K+ policies; the AAA-sourced policy file is data-room request #1): agent-of-record re-anchoring into the regular agency channel, bundle attach at the filed account discount, continuity pricing within the filed structure. (ii) Repurpose the litigation as settlement leverage for the *book*, not the brand: renewal-rights protections, member-data and non-solicitation terms, or a paid second-carrier slot inside AAA's multi-carrier agency — MCIC's 370-job Rhode Island servicing build-out signals a three-to-four-year migration plan [9], which is time MAPFRE can use. (iii) Honest triage: retention targets are premium-quality-weighted, not policy-count-weighted — if MCIC wants to buy the underpriced bottom quartile with ACE-pool subsidy, let it. *Arithmetic:* passive runoff retains ~25–30% (~ −\$140–150M by 2029); the managed target is 50–60% retention. The delta versus passive is 20–35 retention points on a >\$200M book — **\$40–70M/yr of defended premium** — the largest defended-dollars-per-dollar-spent item on the board, at \$10–20M of cost. *Risk:* MCIC prices irrationally low with pool subsidy; the bundle, not price, is the counter — a home+auto+umbrella account is roughly three times harder to move. *Metric:* monthly CAR share in AAA-heavy territories; AAA-book retention through the January 2027 wall; re-scope gate Q2 2027.

2b. Industrialize the group-deviation machine. Deepen the top 30–50 anchor groups from Commerce's 4% modal discount to 5–6% (peers' modal deviation is 5%, and approved maxima run to 9–10% [19][20]); add payroll deduction and co-branded digital enrollment — on the Pillar 3 bind rail — for the credit unions and banks already on Commerce's approved list (DCU, Eastern Bank, et al.). Cost ~\$3–6M/yr in rate. *Why it wins:* this is the regulator-sanctioned headline price weapon that Progressive (zero deviations) and GEICO (eight) structurally cannot match [20], with the 35% participation rule waived through 2030 [21]. The realistic AAA replacement is this *portfolio*, not a single new partner — no Massachusetts group approaches AAA's 1.2M member households. *Arithmetic:* 10–20K new group policies over three years ≈ **\$18–36M**. *Risk:* deviation deepening leaks margin if un-targeted; deepen only anchor groups with measured loss ratios. *The honest stress test — what if Progressive files deviations in 2027?* §193R is open to any carrier; Progressive's zero is a choice, reversible with routine DOI filings. What protects the franchise is position, not statute: 280 groups against Plymouth Rock's 117 (5% modal, 10% max), Safety's 68, Arbella's 72 and GEICO's 8 [20]; the anchor sponsor relationships (no Massachusetts group approaches AAA's 1.2M member households, and the largest sponsors are already on Commerce's approved list); and the 12–24

months any entrant needs to negotiate sponsors and file group by group. A Progressive entry in 2027 starts a franchise build MAPFRE completed years ago — and this initiative widens the gap it would have to close. Note also that deepening to 5–6% reaches Plymouth Rock's existing 5% modal: the durable advantage is the breadth of the 280-group portfolio and its anchors, not the headline percentage — the quarterly deviation-ladder metric tracks both.

2c. Homeowners to ~13%: the bundle offensive, with a hard-gated coastal tranche. The closest thing to free growth in the stack. MAPFRE is #1 in Massachusetts home at 10.62% — barely half its auto share — in a line that ran a 30.0% loss ratio in 2024 [22], in a market that grew 12.7% while MAPFRE's voluntary share slid from 12.5% to 11.0% [23], with property-cat reinsurance 10–12% cheaper at the January 2026 renewal [26] and the full parity gap worth ~\$275M through agents already under contract [22][2]. Mechanics: measure bundle attach on the 909K-exposure auto book (data-room request #2); agency-level attach targets with attach compensation; pre-filled cross-sell at every auto new business; renters as the feeder (bundled renters retain at 95% vs. 82% [24]); umbrella *only* as conservatively underwritten bundle cement over MAPFRE auto+home — industry personal umbrella ran a ~200% combined ratio in 2024 [25] and is never a standalone line here. Coastal: a wind-managed tranche — inspection-driven, bundled-only, percentage wind deductibles, **capped at \$30–40M DWP** — pre-positioned now but **gated on an actual MPIUA (FAIR Plan) rate filing**: the moratorium expired March 2026, no filing has appeared, and the hearing process gives 12+ months of lead time [23]. *Arithmetic*: home share 10.6% → ~13.1% by 2030; the impact is the incremental share only, valued at the model's conservative ~\$4.3B 2030 market — $(13.1\% - 10.62\%) \times \sim \$4.3B \approx \$107M$, risk-adjusted to **\$95–115M** of annual premium (market growth on the base share is excluded as upside, per the Financial Business Case's discipline #1) — with full parity (~\$275M) named as post-2030 upside. Bundle retention spillover: lifting attach from an assumed ~25% to 40% moves ~136K customers from 85% to 95% retention [24] → ~13,600 fewer defections/yr $\times \sim \$1,450$ average premium $\approx \sim \$20M/yr$ of **auto premium retained, compounding — counted as defended premium, never as growth**. Mix effect: every home dollar written at these loss ratios is combined-ratio-accretive. *Risk*: the 30% loss-ratio year was benign weather, not skill; an immature coastal book plus one Northeast hurricane is a ratings event on a \$561–684M surplus base [5] — hence the cap, the gate, and the inland/suburban core. *Metric*: *bundle attach rate quarterly; home share semi-annually*.

2d. Commercial auto: fix the leak, win the CAR seat. Two moves only. (i) A **90-day diagnosis** of why Commerce's #1 Massachusetts commercial-auto line shrank ~4.5% year-over-year into August 2025 while the market grew ~3% and Arbella grew ~14% [27] — deliberate discipline or share loss — before any commercial investment decision. (ii) An all-out bid to **retain the CAR commercial servicing-carrier appointment**: one of four seats, five-year term ending December 31, 2026, RFP imminent [28][29]. The seat confers expense-allowance income, agent stickiness in hard-to-place classes, and an information moat over a ceded pool of ~\$260M — roughly 18–19% of the state's commercial-auto market — at near-zero capital [28]. On the board agenda this month. *Arithmetic*: reversing the –4.5% leak and regaining ~1.5–2.5 points of the \$1.43B commercial-auto market $\approx +\$25–35M$ by 2031 (share-driven, valued at the 2024 market per the Financial Business Case's discipline #1; market growth on the held book is unbooked upside), at commercial-lines margins (MAPFRE's regional non-auto P&C ran a 78.9% combined ratio in 2025 [3] — mix-accretive). No BOP/CMP acquisition spend this cycle: Safety needed two decades to build a \$32M BOP book [37] (see "What MAPFRE will not do," item 4). *Risk*: losing the seat to a hungrier bidder; the RFP war room stands up in week one.

Pillar 3 — Price and reach where competitors can't: telematics, the urban credit harvest, and the agent-assigned digital rail

Owners: Chief Actuary/Pricing (3a); GM, New Segments (3b); Chief Digital Officer (3c). Budget: \$19–35M over three years. Sequencing rule: 3c launches only after Pillar 1's agent investments are visible to agents.

3a. Re-arm MotionSmart — one filing, symmetric by design. Refile from today's token "up to 2%" [31] — down from up to 10% at enrollment and up to 20% at renewal at the July 2021 launch [32] — to an **8–10% at-quote participation discount with a symmetric $\pm 20\%$ renewal swing**, filed as one structure from day one. This sits squarely inside revealed DOI tolerance: Plymouth Rock's DriveSavely holds 10% at quote and a $-20\%/+20\%$ renewal swing [30], and Snapshot operates in Massachusetts with surcharges. CMT — already MAPFRE's vendor and headquartered in its home market — is the delivery partner; the program is built privacy-native (opt-in, first-party, no third-party sharing) for either version of the pending Massachusetts Data Privacy Act. Fast-follow filing: a third-party at-quote driving score (Arity IQ / TransUnion-CMT) — no approved Massachusetts filing uses one, the sole first-mover element in this plan; file first and expect Progressive to follow within 12 months. **Kill trigger built in: if the DOI approves discount-only, do not launch.** That is MotionSmart 1.0 again — discount-only donates premium on good risks; Progressive's UBI economics only turned decisively positive after surcharge capability arrived in 2014 [33]. *Why it wins:* under Massachusetts' rating-factor bans (enumerated in the Market & Competitive Landscape), telematics is the only high-dimensional pricing lever the law permits, and the carrier taking MAPFRE's share calls UBI its single most predictive variable at 3x the next best [33]. This stops Snapshot's skim of MAPFRE's best risks. *Arithmetic:* 30% new-business enrollment by 2028 (Allstate's 30–40% penetration in offered states is the proven benchmark [34]) builds an enrolled book worth **0.5–1.0 portfolio combined-ratio points by year 4** ($\approx \$12\text{--}25\text{M/yr}$ of loss-cost advantage on the Massachusetts book), plus documented retention lift — Progressive's top discount earners renew at rates six points higher [33]. Investment $< \$10\text{M}$. *Metric: filing approved as symmetric by mid-2027; new-business enrollment rate quarterly.*

3b. Harvest the MAIP credit system: the trilingual urban franchise — pilot first. Stop the regulatory crusade — MAPFRE has backed credit phase-outs and lost every time since 2016, and the 2026 CAR Actuarial Committee again protected the DOI-territory credits [35]; arbitrage beats advocacy. Harvest instead the $\sim \$1.36\text{B}$ of credit premium used annually to offset MAIP assignments, 73.8% of it generated in 11 urban territories at $\sim \$2,900$ of average offset per voluntary car year [35]. The double-paid economics: Commerce absorbs $\sim 1.7\text{x}$ its pro-rata MAIP share (30.4% of MAIP assignments against an 18.1% voluntary share [36]; Safety runs $\sim 0.7\text{x}$ [37]), worth an estimated $\$3\text{--}9\text{M/yr}$ of underwriting drag (assumption-flagged; calibrated to CAR exhibit averages). Every voluntary urban car year written in the credit territories earns adequately priced new premium *and* $\sim \$2,900$ of quota-share offset [35] — and those territories are where Massachusetts actually grows: Latinos were roughly 8 in 10 net new residents from 2014–23 [48], Brazilians are the state's largest immigrant group at $\sim 140\text{K}+$, Portuguese-speaking and owned by no carrier [49], and MAPFRE's Puerto Rico operation is a genuine brand bridge into Springfield, Holyoke and Boston. Build: bilingual Latino- and Brazilian-owned agency recruitment; end-to-end Spanish **and Portuguese** sales, service and claims — translation alone fails ($\sim 40\%$ of Spanish-dominant consumers only make high-value purchases with native-language support [50]); Rule 29.F credit purchases as a bridge tactic. **Pilot first: the 2–3 richest credit-factor territories, targeting $\sim 3,000$ voluntary car years by mid-2028; the**

10K-car commitment and the full trilingual claims build are gated on pilot loss ratios and service metrics. The talent lift — bilingual adjusters and CSRs — is real and was underpriced in earlier drafts; budget \$10–18M. Telematics-at-quote (3a) is the urban underwriting tool. *Full-scale arithmetic: +10,000 voluntary urban car years ≈ \$20–29M premium, plus ~\$29M of credit premium cutting assignment intake 25–35% and shedding \$3–9M/yr of drag [35][36].* Timing: MAIP rates are the most adequate in years (assignments –38.4% in 2025 after the July 2025 filing [35]) — the risk of writing urban voluntary business is at its cyclical low. Risk: pilot loss ratios underperform; mitigants are Commerce's own adequate rates (the statutory "lower-of" rule bites least now), telematics-at-quote underwriting, and starting in the 1.25–1.75x credit-factor cells where offset economics are richest.

3c. Bind-online with agent assignment — the Prime clone, at pilot scale, sequenced last. Enable quote-to-bind on the existing website at existing filed rates, with every policy assigned to a local agent for a one-time marketing fee, full commission, and lifetime ownership of the account — the Plymouth Rock eSales mechanic, proven in Massachusetts continuously since October 2015 [39]. A \$5–15M MVP on the already-built Guidewire core [51], launched with agent advisory council endorsement **only after Pillar 1 deliverables are visible to agents;** abandoned and completed quotes recycled to agents as consented leads — **and this lead-routing mechanic launches immediately, in the first 100 days, as a zero-conflict interim fix for the funnel leak while the bind rail waits its turn in the sequence;** the Citation/American Commerce paired-entity filing — the accepted Massachusetts template for channel separation since Progressive's 2008 dual-entity structure — held in reserve, unused unless channel separation is ever needed. Guardrails, verbatim: owned traffic first; aggregator buys capped at calibration size with loss-ratio gates (Plymouth Rock's ~\$260M aggregator-sourced Partner book ran elevated loss ratios for years [38]); scale paid digital only where measured CAC beats the \$500–900 per-bound-policy benchmark [40]. **The year-5 scale forecast is killed: budget the 10K-policy pilot (~\$17–20M premium, \$5–9M acquisition spend, partially offset by agent fees) and a 15–25K-policy steady state (~\$25–40M). Measured CAC and channel loss ratio — not the deck — authorize anything more.** *Why it wins even at modest premium:* strategic value exceeds premium value. This is the delivery rail for AAA re-anchoring offers, group digital enrollment, in-language purchase, and telematics-at-quote — and it closes the self-inflicted leak of a quote page that today hands MAPFRE brand demand to Progressive's funnel during record shopping (47.1% of in-force policies shopped [46]) and the minimum-limits repricing wave (+36% on minimum-coverage premiums since July 2025 [47]). Competitors cannot compete away the closing of your own funnel. Risk: channel conflict; the agent-assignment mechanic, sequencing rule, and advisory-council launch are the mitigation — Plymouth Rock has operated this promise for a decade without losing its agency franchise [38][39].

Pillar 4 — Self-fund, repair the flank, and release capital: the claims engine, the experience turnaround, and the West Coast review

Owners: Chief Claims Officer (4a, 4b); CFO (4c). Budget: \$12–22M over three years, with 12–24 month payback. This pillar is what lets the CFO tell Madrid the program is substantially self-funded.

4a. Claims-economics self-help. Subrogation analytics first: the industry recovers on average 4.5% of net claims paid through salvage and subrogation (6.2% among firms with any recovery) [41], roughly 15% of claims close with a missed subrogation opportunity, and industry leakage runs \$15–20B annually [42] — recovery-detection models plus a dedicated unit are the fastest-payback claims investment available. Then scale what is already licensed but under-deployed: ePICS photo appraisal pushed toward touchless norms, two-way claims texting, One Inc instant payment as the default, and the DRP repositioned for the ADAS and labor-rate era — calibrations now appear on 23–35% of appraisals [54], and MAPFRE holds one of three insurer seats on the state's labor-rate Advisory Board. *Arithmetic:* U.S. paid losses $\approx$ \$2.5B premium $\times$ $\sim$ 65% loss ratio $\approx$ \$1.6B; +0.5–1.0 point of net recovery = **\$8–16M/yr, rate-free**; touchless penetration and steering a further 0.3–0.5 CR points (**\$7–12M/yr**). Combined: **\$20–40M/yr $\approx$ 1–1.5 combined-ratio points of self-help** funding the program's opex. *Risk:* tool deployment without operating-model change — which is exactly the pattern to date, hence 4b.

4b. The operating-model fix — non-negotiable. This organization has already fielded ePICS, One Inc, and Shift without moving its six-year bottom-tier J.D. Power record (detailed in the Situation Assessment) [44][45]. The constraint is operating model, not software. The fix: claims-experience KPIs — touchless share, cycle time, texted-claims share, claimant NPS — go on the same executive scorecard as the combined ratio, managed to cycle-time and NPS targets, never headcount targets. Repair cycle time is the industry's proven retention lever (the 2025 industry improvement to 19.3 days from 22.3 drove the year's satisfaction gain [43]) — and claimants are the book's most shop-prone customers.

4c. West Coast hold/fix/sell review — year 1. The California/Oregon/Arizona block (Commerce West) is strategically orphaned from the New England franchise: it shares no distribution, no regulatory regime, and no brand density with the business this strategy defends. A disciplined review in 2026–27 creates a capital-release option that could offset a substantial share of the Massachusetts program's cost — the block's premium and allocated surplus are to be established from the statutory statements (data-room item), so no release figure is asserted here. Sale is a legitimate outcome — the 2018 sale of the New York renewal rights to Plymouth Rock shows clean exits execute; passive continuation is the one indefensible option. *Deliverable: board recommendation by Q2 2027.*

The program on one page

#	Initiative	Owner	Horizon	Investment (3-yr)	Annual impact by 2030–31	Leading indicator
1a	Rater APIs, EZLynx, STP	Chief Distribution Officer	0–12 mo	within P1 envelope (\$28–42M)	arms 1b–1c, 2a, 3c	% top-400-agency quotes incl. MAPFRE rate (qtrly); EZLynx live Q2 2027
1b	Consolidator platform agreements	Chief Distribution Officer	0–18 mo	within P1 envelope	~\$150–160M defended	agreements signed w/ top 10 acquirers
1c	Safeco transition desk	Chief Distribution Officer	this quarter	within P1 envelope	~\$35M growth (10% pool capture)	ex-Safeco appointments & rolled exposures (monthly, to CEO)

#	Initiative	Owner	Horizon	Investment (3-yr)	Annual impact by 2030–31	Leading indicator
1d	Loss-ratio-gated comp	Chief Distribution Officer	12–24 mo	within P1 envelope	supports +1.0 pt share ≈ \$74M	agency-cohort loss ratio vs. growth
2a	AAA retention offensive	Chief Marketing/Affinity Officer	now–Q2 2027	within P2 envelope (\$38–61M): \$10–20M	\$40–70M defended vs. passive runoff	AAA-book retention through Jan 2027 wall; territory CAR share (monthly)
2b	Group-deviation deepening	Chief Marketing/Affinity Officer	0–24 mo	within P2 envelope: ~\$3–6M/yr in rate	\$18–36M growth	new group policies; anchor-group filings placed
2c	Home to ~13% + bundle	Chief Product Officer, PL	0–48 mo	within P2 envelope	\$95–115M growth + ~\$20M/yr retained auto (defended)	bundle attach rate (qtrly); home share (semi-annual)
2d	Commercial-auto leak + CAR seat	President, Commercial Lines	90 days / 12/31/26	within P2 envelope	~\$25–35M growth	diagnosis day ~100; RFP won
3a	MotionSmart symmetric refile	Chief Actuary / Pricing	file 2026–27	within P3 envelope (\$19–35M): <\$10M	0.5–1.0 CR pts (≈\$12–25M/yr)	symmetric approval; 30% NB enrollment by 2028
3b	Urban credit harvest (pilot)	GM, New Segments	pilot to mid-2028	within P3 envelope: \$10–18M	\$20–29M growth + \$3–9M/yr drag shed	~3,000 pilot car years; pilot loss ratio gate
3c	Bind-online, agent-assigned	Chief Digital Officer	after P1 visible	within P3 envelope: \$5–15M MVP + \$5–9M pilot media	\$25–40M growth (steady state)	CAC < \$500–900; channel loss ratio; agent-council endorsement
4a	Claims self-help	Chief Claims Officer	0–24 mo	within P4 envelope (\$12–22M)	\$20–40M/yr ≈ 1–1.5 CR pts	net recovery rate; touchless %
4b	Claims operating model	Chief Claims Officer	Q4 2026 scorecard	within P4 envelope	retention (enabler)	cycle time; claimant NPS on exec scorecard
4c	West Coast hold/fix/sell	CFO	rec. Q2 2027	within P4 envelope (review cost only)	capital-release option	board recommendation delivered

Net effect versus drift (developed fully in the Financial Business Case): ~\$260–370M of identified annual growth, plus ~\$60–90M of defended premium (the AAA retention delta and bundle-retained auto), plus ~\$250–350M of drift losses avoided — a ~\$450–650M swing against the drift baseline by 2030–31, the components partially overlapping and reconciled line by line in the Financial Business Case — on \$85–135M invested, with the combined ratio held ≤96.5% in the build years and ≤96% from 2028.

What MAPFRE will NOT do

These are standing constraints, adopted by board resolution alongside the strategy, so that killed initiatives cannot creep back in through workstreams.

1. **No New England state expansion this cycle.** No New Hampshire, Maine, or Vermont builds; no Connecticut fix-then-grow. The entire NH prize at a heroic 4% share is ~\$49M [2] — two-thirds of one Massachusetts share point winnable at marginal cost — fought against Safety and Plymouth Rock on shelves they own, by a carrier whose February 2020 "we want more exits" record every recruited agent can discover, with guaranteed profit-sharing floors as an unpriced contingent liability. **Revisit only after the YE2028 trajectory gates (auto $\geq 18.6\%$ and rising, home $\geq 11.7\%$ with attach $\geq 40\%$, CR $\leq 96\%$) are met.**
2. **No funded bolt-on acquisition.** The \$50–300M single-state deal is demoted to an unfunded opportunistic screen with pre-agreed criteria: it has no identified target, is priced off a distressed 2015 comp no 2026 seller will honor, is silent on ~\$100M+ of supporting surplus (true ask \$150–250M), runs 2–3x Madrid's demonstrated ~\$95M bolt-on appetite, and faces Plymouth Rock as the natural rival bidder. Buying premium is not growth and is never booked in the portfolio arithmetic. If a distressed renewal-rights book lands at Fireman's-Fund pricing, take the call.
3. **No equity checks to affinity partners.** MAPFRE may pitch AAA Northeast and other Northeast clubs a *non-equity* paid second-carrier or marketing slot as settlement architecture — but writes no equity capital and posts no contingent capital to any club. The live precedent is adverse: the AAA Washington JV (ACMIC) required a Q4 2025 capital contribution and spent months under AM Best review with negative implications before its December 2025 affirmation [52]. Conceding equity is the tax currently bleeding MAPFRE, not a strategy.
4. **No inorganic BOP/CMP acceleration.** The \$20–40M MGA/renewal-rights spend is killed. Small commercial is a scale and STP arms race — carriers above \$2.5B took twelve share points in six years, and Safety needed two decades to reach a \$32M BOP book [37]. Commercial-auto defense and the CAR seat survive; BOP is gated behind the 90-day diagnosis and a shipped shared STP platform.
5. **No coastal homeowners scaling before an actual MPIUA rate filing exists — and never above the \$30–40M DWP cap.** Bundled-only, inspection-driven, percentage wind deductibles [23].
6. **No direct-channel scale case in the plan.** The pilot and the 15–25K-policy steady state are funded; the 40–55K-policy / \$70–100M year-5 forecast is killed. Measured CAC (<\$500–900 [40]) and channel loss ratio authorize each scaling tranche — eight consecutive qualifying quarters before any scaled paid-digital budget.
7. **No un-gated commission escalation** against Safety's loyalty architecture. Only the loss-ratio-gated version ships; an un-gated arms race is matched within one cycle at symmetric cost.
8. **No umbrella as a standalone line** (~200% industry combined ratio in 2024 [25]) — bundle cement over MAPFRE auto+home only, conservatively underwritten at corrected rates.
9. **The unanimous negatives, permanent:** no NY/NJ re-entry (NY ran a –17.2% private-passenger underwriting margin in 2023 [55], and the renewal rights were sold to Plymouth Rock in 2018); no greenfield direct brand or Verti relaunch — Verti USA is MAPFRE's own controlled experiment in that failure, dead within four years with no disclosed premium [56]; no channel-differentiated web rate on the

Commerce entity; no standalone workers' compensation on own paper (−14.6% ordered in 2024, +7.1% denied in 2025 — partner or front only); no scaled aggregator buying at the 2026 price peak; no in-house telematics stack; no core replatforming — the core is modern [51], and any "modernization" proposal is re-scoped as productization or rejected; no further MAIP credit-system advocacy [35].

10. **No West Coast growth capital and no drift:** hold/fix/sell review only, board recommendation Q2 2027.

7. Financial Business Case

The strategy is worth a ~\$450–650M swing in annual premium versus drift by 2030–31, purchased with \$85–135M of investment over three years, roughly half of which is recovered inside the program by claims-economics self-help — while the combined ratio is held at $\leq 96.5\%$ through the two build years and $\leq 96\%$ from 2028. This chapter makes that claim auditable: it states every assumption, builds the drift and strategy trajectories year by year, reconciles them to the initiative arithmetic in the pillar chapters, and shows payback on a cash basis a CFO can re-run. Figures are labeled **[F]** where anchored to the engagement fact base (cited), **[A]** where they are planning assumptions, and **[D]** where derived arithmetically from the two.

The model is deliberately conservative: no rate-inflation credit, no double-counting, killed initiatives at zero

Four modeling disciplines govern everything below. A skeptical reader should check them first, because they are where strategy cases usually cheat.

- 1. Every impact figure is a share- or mix-driven increment — no rate-inflation credit is booked.** MA private passenger auto (\$7.381B DWP, 2024 [2]) will likely compound at $\sim 2\text{--}3\%$ /yr on rate [A], and MA home (\$3.76B, 2024 [3]) at $5\text{--}7\%$ /yr [A]. The model holds the auto market flat at $\sim \$7.4\text{B}$, allows home only well-below-trend growth to $\sim \$4.3\text{B}$ by 2030, and values each impact line on one stated basis: auto lines at the flat $\$7.4\text{B}$ market; the home line as the *incremental share only* valued at the $\sim \$4.3\text{B}$ conservative 2030 market (growth on the base share is excluded); commercial as share recovery valued at the 2024 market. Market growth on the retained book ($\sim \$180\text{--}260\text{M}$ by 2030–31 [D]) is symmetric upside to both cases and is excluded rather than argued over.
- 2. Defended premium is never counted as growth.** The AAA retention delta ($\$40\text{--}70\text{M}/\text{yr}$ [D]), the bundle-retention auto spillover ($\sim \$20\text{M}/\text{yr}$), and consolidation-protected premium ($\sim \$150\text{M}$) keep existing dollars on the books; they appear on their own lines, carry no growth multiple, and the consolidation line is excluded from the swing total because it overlaps the share-recapture arithmetic.
- 3. Initiative impacts are risk-adjusted midpoints, not stretch cases.** The judged-out numbers stay out: the year-5 direct-channel scale case ($\$70\text{--}100\text{M}$) is killed; bind-online is booked at pilot-plus-steady-state only ($\$25\text{--}40\text{M}$). The coastal home tranche is capped at $\$30\text{--}40\text{M}$ DWP and gated on an MPIUA filing that does not yet exist — it is booked inside the home line, not on top of it.
- 4. Gated spend shrinks with gated revenue.** Urban scale-up, bind-online scaling, coastal, and the comp redesign release funding only on metric triggers, so the downside case (below) sheds cost alongside premium.

The 2025 baseline: a repaired-margin, shrinking-share franchise

Baseline metric (as stated basis)	Value	Basis
US group direct written premium (2024–25)	~\$2.6B	[F] [5][4]
MA private passenger auto DWP / premium share (2024)	\$1,325.9M / 17.96%, #1	[F] [2]
MA auto exposures / exposure share (Dec 2025)	908,833 / 18.33% of 4.958M pool (22.1% in 2020)	[F] [1]
MA homeowners DWP / share (2024)	\$399.1M / 10.62%, #1; 30.0% loss ratio; voluntary share 12.5% → 11.0% (2023 → 24)	[F] [3][7]
MA auto market / one share point	\$7.381B / ~\$74M	[F] [2]
North America combined ratio 2023 → 2024 → 2025	105.4% → 98.7% → 95.4% (auto 97.8% in 2025)	[F] [4][12]
Commerce statutory surplus (YE2023) / dividends to parent 2019–23	\$561.0M / \$246.7M	[F] [5]
AAA Northeast-sourced premium (2025); JMA expiry	>\$200M; 12/31/2026	[F] [6]
Average MA auto premium per exposure	~\$1,450	[A] (derived from [1] [2], mixed years)
MA exposure pool trajectory	4.96M, –0.2% to +0.5%/yr	[A] [1]

Two structural facts frame everything: the margin repair is complete (95.4% CR, record €139M North America result [4]) but was bought with ~4 points of MA auto share; and >\$200M of premium — roughly 2.0–2.3 points of MA auto share [D] — sits on a distribution agreement that dies on December 31, 2026 [6]. The share-point conversion assumes ~75–85% of the AAA-sourced book is MA personal auto [A] (the JMA covers AAA's Massachusetts territory, but the book includes home and umbrella; the exact composition is the first output of data-room request #1 — up to ~2.7 points if the book were entirely MA auto). The baseline is not stable. There is no "hold current numbers" option, which is why the honest comparison is strategy versus drift, not strategy versus today.

Drift baseline: doing nothing costs \$250–350M of premium and 2–3 points of share by 2030–31

The drift case assumes management executes competently on today's model but launches nothing: no retention offensive, no rater/API build, no bundle program, no telematics refiling.

Drift assumptions [A]: (i) the AAA book runs off at passive retention of 25–30% as MCIC absorbs January-2027+ renewals — a loss of ~\$140–150M by 2029; (ii) underlying share erosion resumes at ~0.5 pt/yr from 2027 as Safety, Plymouth Rock and Arbella complete their repricing [11] and Progressive keeps compounding — ~1.0–1.4 pts

cumulative net of overlap with the AAA loss; (iii) home share continues the 12.5% → 11.0% slide [7] toward ~9.5–10%; (iv) the expense base (~29% of NEP [5]) deleverages against a shrinking book and the full MAIP overburden (\$3–9M/yr drag [A]) persists, pushing the CR to 96–98%.

The drift share endpoint is auditable in one line **[D]**: 18.33% today, less ~1.4–1.7 pts of AAA passive runoff (the MA-auto portion of the \$140–150M, on the ~75–85% composition assumption), less ~1.0–1.4 pts of resumed net erosion ≈ 15.2–15.9% — published conservatively (i.e., favorably to drift) as **~15.5–16%**.

Drift trajectory	2025A	2026	2027	2028	2029	2030–31	Basis
MA auto exposure share	18.33%	18.2%	17.3%	16.6%	16.1%	~15.5–16%	[D] from [A] above
MA auto PIF (exposures, K)	909	900	855	820	795	~770–800	[D]
MA home share (NAIC basis)	10.6%	10.5%	10.3%	10.1%	9.9%	~9.5–10%	[A] trend [7]
US group DWP (\$B)	~2.60	2.58	2.42	2.34	2.30	~2.25–2.35	[D]
Combined ratio	95.4%	95.5–96%	96–97%	96.5–97.5%	97–98%	96–98%	[A]

Interim-year values are interpolations **[D]**. Note what drift does to the concentration story Madrid worries about: MA auto *rises* to ~53–56% of a smaller US book — the drift case is simultaneously smaller, less profitable, and more concentrated by product.

Strategy case: share walk to ≥19%, home to ~13%, DWP to ~\$2.8–2.9B

The strategy case is built bottom-up from the pillar arithmetic, with each component phased over the years it can realistically land.

MA auto exposure-share walk, 2025 → 2030–31:

Component	Share impact	Timing	Basis
Starting share (Dec 2025)	18.33%	—	[F] [1]
AAA book net runoff (managed retention 50–60% vs. 100% today; ~75–85% MA-auto composition)	–0.9 to –1.2 pts	2027–28	[A] retention target and composition; book size [F] [6]
Underlying share erosion (drift assumes –1.0 to –1.4 pts)	0.0 — assumed halted by Pillar 1 [A]	2027–31	[A] — see note below
Agency share recapture (P1: rater ubiquity, consolidator deals, repricing slippage at Safety/PR/Arbella)	+1.0 pt	2027–29	[A] planning estimate; tripwire = quarterly quote-stack metric
Safeco-disruption capture (~25K exposures ≈ 10% of Liberty's MA book)	+0.5 pt	2026–28	[A] ; pool size [F] (Liberty ~4.98% MA share [10])

Component	Share impact	Timing	Basis
Bundle retention lift (attach ~25% → 40%; ~13,600 fewer defections/yr from 2028)	+0.4–0.5 pt	2028–31, compounding	[A] attach; retention delta [F] [8]
Urban voluntary book (P3b, gated on pilot)	+0.2 pt	2028–31	[A] , pilot-gated
Bind-online steady state (15–25K policies, gated)	+0.3–0.4 pt	2028–31	[A] , CAC-gated
Net (risk-adjusted)	≥19.0–19.5%	2030–31	[D]

The erosion line is the plan's largest single unpriced assumption, and it should be read as such. The walk assumes Pillar 1 does two jobs at once: it *halts* the ~1.0–1.4 pts of underlying erosion the drift case books from 2027, *and* it delivers +1.0 pt of recapture — a combined ~2.0–2.4 pt swing (~\$150–180M of annual premium) resting on a \$28–42M pillar. That is why the quarterly quote-stack metric is the program's first tripwire, why the pre-mortem's "parity without preference" scenario is treated as the second most likely failure mode, and why the downside case below stresses the erosion assumption directly rather than assuming it away.

The gross walk sums to ~19.5–19.9%; the headline target of ≥19.0–19.5% embeds a further haircut for execution slippage **[A]**. On PIF: at 19.0–19.5% of a 4.96–5.11M pool, MA auto exposures land at ~945K–1.0M **[D]**; the blueprint's ~975K–1.01M range sits in the upper half of that band because the urban harvest adds *new-to-insurance* customers — it grows the pool itself, not just MAPFRE's slice of it **[A]**.

Home: share path 10.6% → 10.7% (2026) → 11.1% → 11.7% → 12.4% → **~13.1% (2030–31) [A/D]**. The impact is the *incremental share only*, valued at the model's conservative ~\$4.3B 2030 market (well below the 5–7%/yr trend): $(13.1\% - 10.62\%) \times \sim \$4.3B \approx \$107M$, risk-adjusted to **+\$95–115M** of annual premium versus today. Market growth on the base 10.62% share (~\$55–70M) is excluded as symmetric upside, per discipline #1. The target is roughly 40% of the full auto-parity gap (~\$275M [3][2] **[D]**), which is deliberately *not* booked this cycle and stands as named post-2030 upside. Every home dollar is written at a structurally better loss ratio than auto (30.0% MA home loss ratio in 2024 [3], a benign-weather year **[F]**, versus a 97.8% auto CR [4]), so the home line is CR-accretive even at normalized weather **[A]**.

Annual trajectory, strategy case:

Strategy trajectory	2025A	2026	2027	2028	2029	2030–31	Basis
MA auto exposure share	18.33%	18.5%	18.3%	18.7%	19.1%	≥19.0–19.5%	[D] walk above
MA auto PIF (K)	909	915	905	930	960	~975–1,010	[D]
MA home share	10.6%	10.7%	11.1%	11.7%	12.4%	~13.1%	[A/D]
Home + attach policies vs. 2025	—	+5K	+18K	+38K	+55K	+65–85K	[D]
US group DWP (\$B)	~2.60	2.62	2.58	2.66	2.75	~2.8–2.9	[D]
Combined ratio	95.4%	96–96.5%	95.5–96.5%	95–96%	94.5–95.5%	≤96% from 2028; ~94.5–95.5% exit	[A/D] bridges below

Strategy trajectory	2025A	2026	2027	2028	2029	2030–31	Basis
MA auto % of US book	~51%	~51%	~50%	~49%	~48%	~47–49%	[D]
MA all-lines % of US book	~75–80%	~77%	~77%	~78%	~79%	~79–81%	[D]

The 2027 dip is real and should be presented to Madrid as such: the AAA renewal wall hits hardest in 2027 even under managed retention, and the recapture engines are still ramping. The strategy case does not pretend the AAA book is saveable in full — it turns a ~\$145M passive loss into a ~\$85–95M managed loss [D] and back-fills with growth that compounds.

Note on the mix rows: MA auto falls from ~51% to ~47–49% of the US book — the plan diversifies by *product and customer* (home, commercial auto, urban segments) inside Massachusetts, not by state. MA all-lines premium stays at ~79–81% of the US book [D], because every growth dollar is a Massachusetts dollar; the state axis is deliberately deferred to the post-2028 gate. Under drift, product concentration worsens on a smaller book; under strategy, it improves without a dollar of new-state capital.

Reconciliation: the build-up ties to the pillar arithmetic line by line

Source (annual premium by 2030–31, risk-adjusted)	Impact	Fact-anchored elements	Assumption elements
Agency share recapture (+1.0 pt) + Safeco capture (P1)	~\$74–110M growth	\$74M/pt market math [2]; Safeco retirement & 22K-agency pool [F]	Capture rates [A] — tripwired by the quarterly quote-stack metric; erosion-halt assumption carried on the same pillar
AAA retention delta vs. passive runoff (P2a)	~\$40–70M defended	Book size >\$200M [6]; MCIC's zero MA share through Feb 2026 [F]	50–60% managed vs. 25–30% passive retention [A] (20–35 pts × >\$200M [D])
Group-deviation portfolio (P2b)	~\$18–36M growth	280 approved groups; peers' 5–6% deviations; participation rule waived to 2030 [F]	10–20K new group policies [A]
Home to ~13% (P2c)	~\$95–115M growth	#1 position, 10.62% share, 30.0% LR [3]	Attach lift 25% → 40% [A]; incremental share valued at ~\$4.3B conservative 2030 market [A/D]
Bundle retention spillover (P2c)	~\$20M/yr defended (retained auto)	95% vs. 85% bundled retention [8]	Attach base is data-room request #2 [A]
Commercial auto share recovery + CAR seat (P2d)	~\$25–35M growth	#1 MA position (13.15% Feb 2026); CAR seat expiry 12/31/2026 [F]	Reversing the –4.5% leak and regaining ~1.5–2.5 pts of the \$1.43B market [A]; market growth on the held book is excluded, per discipline #1, and RFP win assumed

Source (annual premium by 2030–31, risk-adjusted)	Impact	Fact-anchored elements	Assumption elements
Urban/credit-territory voluntary book (P3b)	~\$20–29M growth + \$3–9M/yr drag shed	~\$2,900/car-year credit offset; 30.4% MAIP vs. 18.1% voluntary share [F]	10K car years, pilot-gated; drag estimate [A]; the ~\$29M of MAIP credit premium is a quota-share offset, not revenue, and is never booked as growth
Bind-online, agent-assigned (P3c)	~\$25–40M growth	Plymouth Rock Prime mechanic live since 2015; CAC benchmark \$500–900 [F]	15–25K steady state [A], CAC-gated
Consolidation-exposed premium protected (P1b)	~\$150M defended	~2.3%/yr agency ownership churn [F]	<i>Excluded from swing total — overlaps recapture lines</i>
Claims self-help (P4a)	\$20–40M/yr ≈ 1–1.5 CR pts	4.5%/6.2% industry recovery benchmarks, ~15% missed, \$15–20B leakage [9]; \$2.5B US paid-loss base [A/F]	+0.5–1.0 pt net recovery lift [A]
Net vs. drift	~\$450–650M swing: ~\$260–370M growth + ~\$60–90M defended + drift losses avoided (~\$250–350M, partially overlapping)		

Cross-check against the trajectory table: strategy DWP \$2.8–2.9B minus drift \$2.25–2.35B = \$450–650M [D] — the two views tie exactly, with the partial-overlap treatment of defended premium noted above.

Combined ratio: the guardrail, restated honestly, with both bridges shown

The CR guardrail is not decoration — it is the condition under which Madrid funds anything. Stated precisely: **≤96.5% in the two build years (2026–27), ≤96% from 2028, exiting at ~94.5–95.5%.** A flat "≤96% every year" claim would not survive the program's own year-1 cash profile — \$52M of spend against ~\$2.6B of premium is ~2 points if fully expensed — so the interim years are bridged explicitly rather than asserted.

Interim-year bridge (2026–2028) [A/D]:

Component (pts on CR)	2026	2027	2028
2025 actual base	95.4	95.4	95.4
Weather normalization (part of 2025 was benign-weather luck [4])	+0.3–0.5	+0.3–0.5	+0.3–0.5
Program spend, expensed portion (of \$52M / \$38M / \$22M cash: ~50–65% expensed, the rest capitalized build — rater APIs, bind MVP, telematics platform)	+1.0–1.3	+0.9–1.0	+0.5–0.6
Amortization of prior-year capitalized build	—	+0.2	+0.3
New-business strain (growth book seasons worse)	+0.1	+0.2	+0.3

Component (pts on CR)	2026	2027	2028
Claims self-help (ramp: \$5M / \$15M / \$28M)	−0.2	−0.6	−1.0
Mix (home/commercial growth at better loss ratios)	—	−0.1	−0.2
Modeled CR	~96–96.5%	~95.5–96.5%	~95–96%

The underlying rate-earn assumption is stated, not hidden: earned rate covers loss trend in 2026–28 **[A]** — defensible while Commerce holds a 97.8% auto CR and competitors are still filing increases, and the assumption is symmetric with the drift case. If weather or severity breaks against the book, the two-consecutive-quarters-above-guardrail trigger pauses growth spend (see the governance section of the Implementation Roadmap & Operating Model) before Madrid asks.

End-state bridge (to 2030–31):

CR bridge component (by 2030–31)	Impact (pts)	Basis
2025 actual	95.4%	[F] [4]
Program opex (P1–P3 run costs not capitalized)	+0.4 to +0.7	[A]
New-business strain (growth book seasons worse than renewals)	+0.4 to +0.8	[A] industry pattern
Claims-economics self-help (subrogation +0.5–1.0 pt recovery; touchless/steering +0.3–0.5 pt)	−1.0 to −1.5	[A] , benchmarked to [9]
Home/commercial mix shift (30.0% LR home line grows faster than auto [3]; regional non-auto commercial CR 78.9%)	−0.3 to −0.6	[F] loss ratios; mix pace [A]
Telematics enrolled-book effect (30% NB enrollment by 2028; symmetric structure only)	−0.5 to −1.0 (year 4+)	[A] ; kill-trigger if approved discount-only
MAIP drag shed (urban credit harvest)	−0.1 to −0.3	[A] [\$3–9M/yr on ~\$2.6B]
Fixed-cost leverage (growing NEP against ~29% expense base [5])	−0.2 to −0.4	[D]
Strategy case 2030–31	~94.5–95.5%	[D]

The drift CR goes the other way for mechanical reasons: a book shrinking ~10–13% against a fixed expense base adds ~0.8–1.2 pts of expense-ratio strain alone **[D]**, plus the undiluted MAIP overburden and adverse retention mix — hence 96–98%. **The strategy case is the better underwriting outcome, not a margin sacrifice for growth.** The single biggest swing item — claims self-help — is also the least speculative: it requires recovering at industry-average rates on a \$1.6B net-paid-loss base **[A]**, not out-executing anyone.

Investment, self-funding, and payback: breakeven in year 4, ~\$50–65M/yr run-rate return thereafter

The ask: \$85–135M over three years (~1–1.5% of annual premium), sequenced ~\$45–60M / ~\$25–45M / ~\$15–30M. The recommended funding mechanism matters as much as the amount: **a two-to-three-year reduced-dividend agreement, not a capital injection.** Commerce paid \$246.7M of dividends to the parent through its loss-

and-recovery years of 2019–23 [5]; retaining one-third to one-half of that run-rate — against a \$561–684M surplus base [5] and a ~€118M annual U.S. result [4] — funds the program from earnings the U.S. unit already generates. That converts the Madrid conversation from a capital request (hard, precedent-setting) into an earnings-retention agreement (materially easier, reversible, and self-policing through the gate logic). One calibration note on the guardrail: the group's published 2026 target is a 93–94% combined ratio; the ~95–96% working bar used for the U.S. unit throughout this document is a planning assumption **[A]** — the U.S. book runs above the group bar on Massachusetts mix, and the funding paper should have Madrid ratify that differential explicitly rather than leave it implied.

One reconciliation the CFO should surface before Madrid does: the four pillar budget *ranges* sum to \$97–160M at their extremes, wider than the \$85–135M envelope. That is intentional, not sloppy — the gated initiatives (urban scale-up, bind-online scaling, coastal tranche, comp redesign) cannot all reach their maximum funding simultaneously because their release triggers are sequential and conditional. The envelope funds the pillar midpoints (~\$112M at point estimates **[D]**) plus contingency; the gap between the envelope ceiling and the pillar-range ceiling is governance headroom that only metric triggers can unlock.

Investment by pillar (3-year)	Range	Largest items
P1 — Agent desktop	\$28–42M	Rater/APIs, STP, EZLynx, Safeco desk, consolidator agreements
P2 — Defend & densify	\$38–61M	AAA retention (\$10–20M), bundle tooling/comp, CAR RFP, group enrollment
P3 — Price & reach	\$19–35M	MotionSmart refiling (<\$10M), urban pilot (\$10–18M), bind MVP (\$5–15M) plus pilot media (\$5–9M, partially offset by agent fees)
P4 — Claims & capital	\$12–22M	Subrogation analytics unit, touchless scaling, operating-model change
Program envelope	\$85–135M	Year 1 ~\$45–60M

Illustrative cash view (midpoints, \$M) [A/D] — economic return = underwriting margin at a ~95.5% CR (~4.5 pts) plus ~2 pts of investment income on the float carried by incremental premium (new-money yields ~4% **[A]**), i.e., ~6.5% per incremental premium dollar; self-help counted at ramped run-rate:

Year	Program spend	P4 self-help	Margin on incremental + defended premium	Net cash	Cumulative
2026	–52	+5	~0	–47	–47
2027	–38	+15	+5	–18	–65
2028	–22	+28	+12	+18	–47
2029	–8	+32	+23	+47	≈0
2030–31	–5/yr	+32/yr	+25/yr	+52/yr	+52 and compounding

Cumulative cash breakeven lands at year-end 2029 (year 4); the implied program IRR is ~35–45% [D, illustrative]; Pillar 4 standalone pays back in 12–24 months. Peak cumulative exposure is ~\$65M in 2027 — against \$246.7M of dividends Commerce exported to the parent through its loss-and-recovery years 2019–23 [5], and a \$561–684M surplus base [5] that the program never strains because there is no new-state capital, no M&A, and the CR holds inside the stated guardrail. At run-rate, Pillar 4's \$20–40M/yr offsets ~50–70% of the annualized program cost — this is the "substantially self-funded" claim, stated precisely.

Three things this payback math does *not* count, all favorable: the terminal value of a defended #1 franchise versus a melting one (the drift case destroys ~\$250–350M of annual premium whose replacement cost at direct-channel CAC of \$500–900/policy [A] would exceed \$150–250M); the option value of the bind-capable platform and telematics book for any post-2028 adjacency; and rate inflation on the larger retained book.

Downside case: the program still clears its cost of capital when the big assumptions disappoint

Because the sizeable assumptions are independently gated, the honest stress test moves them together:

Stress (all simultaneous)	Plan value	Downside value	Premium impact
AAA managed retention	50–60%	35%	–\$30–50M defended
Underlying erosion halt (P1)	fully halted	only halved (–0.5 to –0.7 pt persists)	–\$37–52M
Agency share recapture	+1.0 pt	+0.5 pt	–\$37M
Home share 2030–31	~13.1%	12.0%	–\$45M
Urban program	scaled (10K)	pilot only	–\$15M (and –\$12M spend)
Bind-online	15–25K steady state	pilot only	–\$15M (and –\$8M spend)
Telematics	symmetric approved	discount-only → killed	CR benefit –0.5 to –1.0 pt (and –\$8M spend)

Downside growth is still ~\$120–220M of annual premium plus ~\$30–40M defended [D], on a gated spend that shrinks to ~\$85–100M; cumulative breakeven slips roughly one year to 2030; the CR guardrail is unaffected because the kill triggers remove the spend with the revenue. **In no modeled scenario driven by the gated assumptions does the strategy underperform drift** — drift is the strategy case with every initiative set to zero, and drift destroys \$250–350M of premium and 1–2 CR points. The true downside scenarios are execution failures — a channel-conflict backlash that puts the consolidation-exposed book in play (R3), or an AAA settlement that consumes cash without retention (R2) — which is precisely why the governance tripwires exist: the quote-stack metric (P1), monthly AAA-territory CAR tracking with the Q2 2027 re-scope gate (P2a), pilot loss ratios (P3b), and measured CAC (P3c).

The YE2028 gates convert this model from forecast to contract

The financial case is falsifiable on three trajectory gates, reviewed at YE2028 and deliberately set at the strategy case's own modeled 2028 values — the test is "on the modeled path," not "ahead of it": **MA auto share $\geq 18.6\%$ and rising for two consecutive quarters; MA home share $\geq 11.7\%$ with bundle attach $\geq 40\%$; combined ratio $\leq 96\%$.** These are checkpoints en route to $\geq 19.0\text{--}19.5\%$ auto and $\sim 13\%$ home by 2030–31, when the recapture, bundle, and gated initiatives reach run-rate. Hit them, and the diversification conversation reopens from strength, with a bind rail, a telematics book, and repaired claims economics already paid for. Miss them, and the gates force the re-scope before good money follows bad — the discipline Madrid did not have in 2017 and the reason this ask is credible now.

8. Implementation Roadmap & Operating Model

The strategy's binding constraint is not capital, regulation, or competitive response — it is execution bandwidth. Fourteen initiatives will land on an organization that has shipped no growth-side or agent-facing capability on its modern Guidewire core in six years — no bind, no rater APIs, no digital enrollment, despite fielded customer-facing claims tools — and the four hard clocks documented in the Situation Assessment all expire inside the plan's first 18 months. The roadmap below is therefore built on three rules: **only three things are 2026 must-wins** (the AAA retention offensive, the CAR reappointment bid, and the Safeco transition desk — everything else may slip a quarter; those three may not); **every initiative carries one accountable owner, one falsifiable leading indicator, and a dated stage gate**; and **the kill list is enforced as governance**, so dead initiatives cannot re-enter through workstreams and fragment attention.

Sequencing follows the dependency chain, not the size of the prize

The pillars are not parallel bets; each arms the next. Pillar 1 (agent desktop) is the delivery rail for Pillar 2's AAA re-anchoring and bundle offensive; the bundle is the retention armor that makes recaptured share durable; Pillar 3's telematics and urban plays run on the bind-capable rail and require agent goodwill that only visible Pillar 1 investment buys; Pillar 4's claims self-help funds the program's opex and repairs the experience flank that makes a passively held #1 share unstable. Three dependencies are non-negotiable:

Dependency	Rule	Rationale
Bind-online (3c) launches only after Pillar 1 deliverables are visible to agents	Agent advisory council previews the design in the first 100 days; pilot go-live no earlier than H2 2027, after EZLynx/STP milestones ship	Activating direct bind before fixing ease-of-doing-business would inflame the channel exactly when the AAA dispute makes agent goodwill scarce; Plymouth Rock's agent-assigned model has run conflict-free in MA since October 2015 and is the proven template [1][2]
MotionSmart relaunch (3a) is gated on DOI approval of the symmetric structure	If the DOI approves discount-only, the program does not launch — that is MotionSmart 1.0 again (discount fell from "up to 10%" at 2021 launch to "up to 2%" today) [3]	Discount-only telematics donates premium on good risks; the DriveSavely precedent (10% at-quote, ±20% renewal swing) shows the symmetric filing is approvable
Coastal homeowners tranche (2c) is gated on an actual MPIUA rate filing and capped at \$30–40M DWP	Pre-position underwriting, inspection and reinsurance now; write only after the filing exists (moratorium expired March 2026; none filed as of July 2026)	An immature coastal book plus one Northeast hurricane is a ratings event on a \$561–684M surplus base [4]

Second-order gates: the urban trilingual build (3b) scales from pilot (~3,000 voluntary car years in 2–3 credit-rich territories by mid-2028) to the 10K-car commitment only on pilot loss ratios and service metrics; BOP/CMP investment stays killed unless the 90-day commercial-auto diagnosis and a shipped STP platform reopen it; and each

direct-channel scaling tranche requires measured CAC below the \$500–900/bound-policy benchmark plus qualifying channel loss ratios for eight consecutive quarters [2].

First 100 days (July 2 – October 10, 2026): three must-wins, one funding paper, no new headcount empires

The first-100-days plan concentrates on the perishable windows. The Safeco desk is the single most time-sensitive item on the board: Liberty retired the brand April 25, 2026, 22,000 agencies lost the only IA-native brand they had, and as of July 2026 no competitor has publicly launched a recruiting campaign [5] — a 90-day delay destroys the thesis because the realistic uncontested window is 6–12 months.

By	Action	Owner	Deliverable
July 17	Board resolution adopting the strategy, the kill list as standing constraints, and the YE2028 gates; CAR RFP war room stood up	CEO; President, Commercial Lines	Signed resolution; RFP workplan
July 17	Safeco transition desk launched: fast-track appointments, Ivans Bookroll-equipped roll team, the no-direct-competition agent pledge (Strategy 1c)	Chief Distribution Officer	Public announcement within 30 days; appointments counted monthly to the CEO
July 31	Interim funnel-leak fix live, ahead of any bind capability: every completed or abandoned website quote routed to a local agent as a consented warm lead within 24 hours (the 3c lead-recycling mechanic, launched immediately — zero channel conflict, value at any CAC)	Chief Digital Officer	Lead routing in production; monthly quote-to-bind conversion metric reported
July 17	AAA retention task force stood up; litigation counsel instructed to open settlement architecture (renewal rights, member data, non-solicitation, paid second-carrier slot); AAA-sourced policy file pulled	Chief Marketing/Affinity Officer	Task force charter; data-room request #1 filled
Day 45	Data-room sprint complete (bundle attach, group-deviation ladder, commercial-auto diagnostics, West Coast economics); 90-day commercial-auto leak diagnosis underway; EZLynx panel negotiation opened; first consolidator term sheets to Kaplansky/Alera and Duffy; MotionSmart symmetric filing build started; subrogation-analytics vendor selected; claims KPIs onto the executive scorecard effective Q4	Named pillar owners	Fact base for all year-1 gates
Day 100	Madrid funding paper delivered (\$85–135M ask framed against \$246.7M of 2019–23 dividends; year-1 tranche ~\$45–60M); agent advisory council convened (enablement first, bind later, visibly); first group-deviation deepenings filed (top 10 anchor groups, 4% → 5–6%); AAA re-anchoring campaign launched into the September–December renewal window; West Coast hold/fix/sell review and urban pilot territory selection commissioned	CEO/CFO; pillar owners	Day-100 board checkpoint: Safeco appointment count, AAA early reads, CAR RFP status, commercial-auto findings, filing readiness, Madrid tranche status

The AAA campaign timing is unforgiving: MCIC showed no measurable Massachusetts share through February 2026 and no MA quote path on AAA's site, so migration concentrates in January 2027+ renewals [6][7] — every month of delay before the January 2027 renewal wall is unrecoverable retention.

Year 1 (through Q3 2027): survive the two hard deadlines, ship the rails, prove the operating model can deliver

Year 1 is deliberately defense-weighted. Roughly \$45–60M of the program (planning estimate within the \$85–135M envelope) deploys here, concentrated in Pillar 1 engineering and the AAA/CAR defense.

- **Q4 2026:** AAA-book re-anchoring and bundle-attach offers running through the renewal-communications window; CAR commercial servicing RFP submitted; JMA expires 12/31/2026 — settlement negotiations continue in parallel, priced around the book (renewal rights, non-solicitation, member data), not the brand [7]. MotionSmart symmetric filing (8–10% at-quote, $\pm 20\%$ renewal) submitted; CMT contract extended; privacy-native consent architecture designed for either version of the pending MA Data Privacy Act.
- **Q1–Q2 2027:** the January renewal wall is the program's first live-fire test — monthly territory-level CAR share tracking against the 50–60% managed-retention target (passive runoff retains $\sim 25\text{--}30\%$). Q2 2027 is the AAA re-scope gate: if MCIC prices irrationally with ACE-pool subsidy and takes the bottom quartile anyway, retention spend is re-triaged premium-quality-weighted, not escalated. West Coast hold/fix/sell recommendation to the board (Q2 2027); commercial-auto diagnosis verdict converts to either a disciplined-shrinkage confirmation or a share-loss repair plan.
- **By Q2–Q3 2027:** MAPFRE live on EZLynx's Massachusetts panel (it is absent today, while national consolidators standardize on that stack [8]); SinglePoint and Vertafore PL Rating connections hardened; STP new-business issuance for clean risks in production; five to eight consolidator platform agreements signed with change-of-control survival clauses. First 30–50 anchor-group deviation deepenings approved (routine filings; the 35% participation rule is waived through 2030 [9]). Bind-online MVP build starts only once the agent advisory council confirms Pillar 1 investments are visible in the field.

Year-1 exit criteria (all falsifiable): AAA-book retention $\geq 45\%$ and tracking to the 50–60% band; CAR seat retained (or a priced exit plan if lost); ≥ 300 ex-Safeco agency appointments with first rolled books (10% pool capture $\approx 25\text{K}$ exposures is the plan-horizon target); MAPFRE rate present in $\geq 60\%$ of top-400-agency new-business quote stacks; MotionSmart symmetric structure approved or the kill trigger exercised; claims KPIs live on the executive scorecard with baselines set.

Years 2–3 (Q4 2027 – 2029): shift from defense to densification, open the gated offense

With the rails shipped and the two hard deadlines resolved, spend rotates toward growth ($\sim \$40\text{--}75\text{M}$ across years 2–3, planning estimate):

- **Bundle offensive at full tempo.** Agency-level attach targets with attach compensation, pre-filled home cross-sell at every auto new business, renters as the feeder. Target trajectory: bundle attach from an assumed $\sim 25\%$ baseline (data-room item) to 40% by 2029, home share from 10.62% toward $\sim 11.7\%$ by YE2028 — the stage-gate checkpoint on the modeled path — en route to $\sim 13\%$ by 2030–31 [10].

- **Loss-ratio-gated compensation redesign (1d)** ships in 2028, after platform agreements and rater ubiquity have already changed agent economics: growth and retention kickers pay only where agency-level loss ratios qualify. The un-gated version stays killed — it is the one move Safety matches within a single cycle at symmetric cost.
- **Telematics scale-up.** Enrollment pushed toward the 30% new-business benchmark (Allstate's 30–40% is the proven ceiling) via agent per-enrollment incentives and point-of-sale defaults; the third-party at-quote score filing (Arity IQ / TransUnion-CMT) follows the symmetric approval — no approved MA filing uses one today, and first-mover advantage is measured in the 12 months before Progressive matches.
- **Urban pilot readout — mid-2028 gate.** Target ~3,000 voluntary car years in the 2–3 richest credit-factor territories (offset economics run ~\$2,900 of credit per voluntary urban car year, and Commerce currently absorbs ~1.7x its pro-rata MAIP share vs Safety's ~0.7x [11]). Pilot loss ratios and bilingual service metrics authorize — or refuse — the 10K-car commitment and the full trilingual claims build.
- **Bind-online pilot** launches H2 2027–2028 at existing filed rates, every policy agent-assigned for a one-time marketing fee with full commission and lifetime ownership; abandoned quotes recycled to agents as consented leads [1]. The 10K-policy pilot (~\$17–20M premium, \$5–9M spend, partially fee-offset) runs to measured CAC and channel loss ratio; the 15–25K steady state is the only funded scale case [2].
- **Claims engine at run-rate.** Subrogation unit and detection models mature toward +0.5–1.0 pt of net recovery (industry averages 4.5% of net claims paid, 6.2% among recovering firms, with ~15% of recoverable claims missed [12][13]); ePICS pushed toward touchless norms; texting and instant payment made default. Combined target: \$20–40M/yr $\approx$ 1–1.5 CR points of self-help by 2029, which is what lets the CFO certify the program as substantially self-funded.
- **Coastal tranche** opens only if MPIUA files and wins a rate action — inspection-driven, bundled-only, percentage wind deductibles, hard-capped at \$30–40M DWP.

YE2028 is the program's master gate, set on the modeled trajectory: MA auto share (exposures) $\geq$ 18.6% and rising for two consecutive quarters; MA home share $\geq$ 11.7% with bundle attach $\geq$ 40%; combined ratio $\leq$ 96%. These are checkpoints en route to $\geq$ 19% auto and $\sim$ 13% home by 2030–31 — deliberately placed at the strategy case's own 2028 values, so the test is "on the modeled path," not "ahead of it." Passing all three earns the right to reopen the diversification conversation with Madrid; missing any one triggers re-scope, not escalation — and the 2017 retrenchment reflex is pre-empted by Madrid's explicit sign-off on this gate logic at program approval.

Years 4–5 (2030–2031): compound, and convert the fortress into optionality

No new initiatives launch in years 4–5; the plan finishes what it started. Home share completes the climb to $\sim$ 13.0% on a market growing to $\sim$ \$4.3B; the enrolled telematics book matures into 0.5–1.0 portfolio CR points of loss-cost advantage; the group-deviation portfolio and urban franchise reach their 2030–31 run rates (+10–20K group policies; +10K voluntary urban car years if the 2028 gate passed); the direct channel operates at its measured steady state of 15–25K policies unless eight consecutive qualifying quarters have authorized more. The end-state book is diversified by product and customer rather than by state — MA auto falls from $\sim$ 51% to $\sim$ 47–49% of US premium

even as it grows — and, if the gates held, MAPFRE enters 2031 with a bind-capable platform, repaired claims economics, and a telematics program that make any post-2030 adjacency (New England expansion, full home parity at ~\$275M, opportunistic renewal-rights deals) dramatically cheaper than they would be today.

Governance: a program office with teeth, an executive scorecard that prices experience, and a kill list that stays killed

Program architecture. A Growth Program Office (GPO) of 6–10 FTEs reports directly to the CEO — not to any pillar owner — with three functions: dependency and gate enforcement, a single program P&L reconciling spend against the Madrid tranches, and a monthly falsifiable-metrics pack. Every initiative has exactly one accountable executive:

Pillar	Owner	Budget (3 yr)	Reports
1 — Agent desktop	Chief Distribution Officer	\$28–42M	Quote-stack share, Safeco desk counts (monthly to CEO), platform agreements signed
2 — Defend & densify	CM/Affinity Officer (2a–b); CPO Personal Lines (2c); President Commercial (2d)	\$38–61M + priced discounts	AAA retention vs. wall, group-policy adds, bundle attach, CAR seat
3 — Price & reach	Chief Actuary (3a); GM New Segments (3b); Chief Digital Officer (3c)	\$19–35M	Filing status, enrollment %, pilot loss ratios, measured CAC
4 — Self-fund & repair	Chief Claims Officer (4a–b); CFO (4c)	\$12–22M	Net recovery pts, touchless %, cycle time, claimant NPS, West Coast review

Cadence. Monthly: CEO reviews the three must-win metrics (Safeco appointments, AAA territory-level CAR share, CAR RFP status) plus the quote-stack tripwire. Quarterly: board reviews the full gate dashboard and one standing kill-list attestation — a one-page confirmation that no item on the standing-constraint register in The Recommended Strategy has re-entered under another name. Semi-annually: Madrid tranche review against the self-help offset schedule and the CR guardrail ($\leq 96.5\%$ in 2026–27, $\leq 96\%$ from 2028).

The operating-model fix is itself a governed deliverable, not an aspiration — the rationale is argued in Strategy 4b [14]. What is new here is the mechanics: effective Q4 2026, claims-experience KPIs — touchless share, repair cycle time, texted-claims share, claimant NPS — sit on the same executive scorecard as the combined ratio, managed to cycle-time and NPS targets and never to headcount targets, with claims-leadership incentives rebalanced accordingly and the GPO auditing the scorecard conversion as a dated milestone [15].

Channel-conflict governance. The agent advisory council is standing, not ceremonial: it previews every consumer-facing digital release, and the sequencing covenant — enablement first, bind later, visibly — is board policy. The Citation/American Commerce paired-entity filing is held in reserve as the accepted MA template (Progressive has filed same-day paired entities since 2008) if channel separation is ever needed; no channel-differentiated web rate ever ships on the Commerce entity.

Talent and technology: five hires that matter, productization only, no replatforming anywhere

The talent plan is short and specific; the plan fails without these roles filled by Q1 2027:

1. **Claims operating-model leader** — empowered by the scorecard change, owns cycle-time/NPS delivery; the highest-leverage single hire in the program.
2. **Settlement-savvy AAA negotiation lead** — the delta between passive runoff and managed retention is \$40–70M/yr of defended premium on \$10–20M of cost; this is a negotiation, not a lawsuit.
3. **API/digital product engineering pod** (in or near Webster, hireable or vendorable) — rater APIs, STP rules, bind MVP, group-enrollment flows, all as products on the live Guidewire core.
4. **Bilingual build for the urban pilot** — Spanish- and Portuguese-speaking adjusters, CSRs, and agency-development staff. This is the genuine talent lift in the plan and the reason 3b is pilot-gated and budgeted at \$10–18M rather than the proposals' \$8–15M; translation alone demonstrably fails with Spanish-dominant purchasers.
5. **GPO lead** — a delivery executive with carrier program-office experience, reporting to the CEO.

Technology policy is one sentence: **productization only, on the live core**. Guidewire InsuranceSuite has been in production for personal lines since 2020 [16]; every gap in this plan — rater ubiquity, STP issuance, bind-online, group digital enrollment, claims transparency — is a build-on-top, not a rebuild. Any workstream that arrives labeled "modernization" is re-scoped as productization or rejected. Vendor posture follows the same discipline: extend CMT (under contract, headquartered in MAPFRE's home market) rather than build telematics in-house; buy subrogation analytics; deploy Ivans Bookroll for the Safeco desk and consolidator rolls; scale ePICS and One Inc that are already licensed. The engineering priority is set by the agent-side facts established in the Situation and Customers chapters [17][18].

KPIs and stage gates: what gets measured, when, and what happens if it misses

Pillar	Leading indicator (cadence)	Stage gate & date	Miss protocol
1 — Agent desktop	Share of top-400-agency new-business quotes including a MAPFRE rate (quarterly); ex-Safeco appointments & rolled exposures (monthly)	EZLynx MA panel live by Q2 2027; ≥60% quote-stack presence by YE2027	Quote-stack miss = early warning that enablement is achieving parity, not advantage → re-allocate toward group/bundle/urban moves Progressive cannot copy; never respond with un-gated commission escalation
2a — AAA	Monthly CAR share in AAA-heavy territories; AAA-book retention (premium-quality-weighted)	≥45% retention at the Jan-2027 wall; re-scope gate Q2 2027 (target band 50–60%)	If MCIC buys the book with ACE-pool subsidy, cede the underpriced bottom quartile, hold bundle-anchored accounts, redeploy spend to 2b/2c

Pillar	Leading indicator (cadence)	Stage gate & date	Miss protocol
2b — Groups	New group policies; deviation ladder vs. peers (quarterly)	First deepenings approved 2026; 10–20K new policies by 2029	Routine filings; low execution risk — misses indicate enrollment UX, fixed on the 3c rail
2c — Home/bundle	Bundle attach rate (quarterly); home share (semi-annual)	Attach $\geq 40\%$ and home $\geq 11.7\%$ by YE2028 (en route to $\sim 13\%$ by 2030–31); coastal only post-MPIUA filing, $\leq \$30\text{--}40\text{M}$ DWP	Attach miss → attach-comp redesign before any coastal risk; cap and filing gate are non-negotiable
2d — Commercial	CAR RFP outcome; commercial-auto book growth vs. market (quarterly)	Seat decision Q4 2026; diagnosis verdict day ~ 100	Seat lost → priced exit plan; BOP stays killed absent diagnosis + shipped STP
3a — Telematics	Filing disposition; new-business enrollment % (monthly post-launch)	Symmetric approval 2027; 30% enrollment by 2028	Discount-only approval = built-in kill trigger: do not launch; pivot to the at-quote score filing as the second path to priced telemetry
3b — Urban	Pilot voluntary car years; pilot loss ratio; bilingual service metrics (quarterly)	$\sim 3,000$ car years by mid-2028 with qualifying loss ratios	Gate fails → hold at pilot scale, keep Rule 29.F credit purchases as the bridge, shed no further spend
3c — Direct	Measured CAC vs. $\$500\text{--}900$; channel loss ratio (quarterly)	Pilot 10K policies; each scaling tranche needs 8 consecutive qualifying quarters	CAC miss → freeze paid acquisition, keep owned-traffic bind live (closing your own funnel leak is value at any CAC)
4 — Claims	Net recovery pts; touchless %; cycle time; claimant NPS (monthly, executive scorecard)	+0.5 pt recovery by YE2027; $\$20\text{--}40\text{M/yr}$ run-rate by 2029	Self-help shortfall directly reduces later-year discretionary tranches — the program's own funding discipline
Program	US combined ratio (quarterly); MA auto & home share	YE2028: auto $\geq 18.6\%$ and rising (two consecutive quarters), home $\geq 11.7\%$ with attach $\geq 40\%$, CR $\leq 96\%$	Any single miss → re-scope at constant budget; CR breach above the guardrail (96.5% in 2026–27, 96% from 2028) for two consecutive quarters → growth spend pauses before Madrid asks

Two features of this table deserve the CEO's attention. First, every gate is falsifiable and dated — the plan can be *wrong in public*, which is what makes it credible in Webster and in Madrid. Second, the miss protocols are pre-committed and asymmetric by design: misses trigger re-allocation or freezes, never escalation. The historical failure mode of Massachusetts share wars — matching Safety's compensation or Progressive's media dollar-for-dollar — is structurally excluded, because the program only ever spends where the arithmetic of an uncopyable asset (280 group deviations, the home machine, the trilingual franchise, the agent pledge) does the compounding.

9. Risks, Dependencies & Mitigations

This strategy asks a fourteen-initiative program of an organization that has shipped no growth-side or agent-facing capability on its modern core in six years, funds it from a parent whose demonstrated reflex under stress is amputation, and times it against four hard deadlines — two of which (AAA and CAR) expire on the same day, December 31, 2026. The honest posture is not that these risks are manageable in general, but that each one has a named owner, a dated early-warning indicator, and a pre-committed response. This chapter registers the eleven material risks, states the hard dependencies the plan cannot function without, and closes with the pre-mortem: the three most likely ways this strategy actually fails.

One framing rule governs everything below: **the drift baseline is not risk-free**. Doing nothing carries a quantified cost — roughly \$450–650M of premium swing by 2030–31, a book shrinking toward ~15.5–16% auto share, and a fixed-cost-strained 96–98% combined ratio (see the Financial Business Case). Every risk here must be weighed against that, not against an imaginary safe harbor.

The risk register at a glance

Likelihood and impact are program-level judgments (assumption-flagged, not actuarial estimates). Impact is rated against the strategy-case arithmetic in the Financial Business Case; "Severe" means the program thesis itself is threatened.

#	Risk	Likelihood	Impact	Primary owner	Decision gate
R1	Madrid withdraws appetite mid-program	Medium	Severe	CEO / CFO	Year-1 tranche (Q4 2026); FY2026 results (Feb 2027)
R2	AAA book loss exceeds plan; MCIC prices with pool subsidy	High	High	Chief Marketing/Affinity Officer	Q2 2027 re-scope gate
R3	Channel conflict: agents read bind-online as betrayal	Medium	High	Chief Distribution Officer	Bind pilot go/no-go (post-Pillar-1 visibility)
R4	Progressive out-executes on the agent desktop	High	Medium–High	Chief Distribution Officer	Quarterly quote-stack review
R5	Safety/Plymouth Rock match the agent offensive	Medium–High	Medium	Chief Distribution Officer	Safeco-desk 6-month readout
R6	DOI approves MotionSmart discount-only, or enrollment stalls	Medium	Medium–High	Chief Actuary	Filing disposition (kill trigger pre-committed)
R7	Legislative loss-cost and privacy shocks (labor-rate floor, MDPA)	Medium	Medium	Chief Claims Officer / GC	7/31/2026 session close; MDPA conference report
R8	Northeast hurricane hits while the home book scales	Low–Medium (annual)	Severe	Chief Product Officer / CRO	MPIUA-filing gate; \$30–40M coastal cap

#	Risk	Likelihood	Impact	Primary owner	Decision gate
R9	Execution capacity: the program breaks at the executive layer	High	High	CEO (program office)	Day-100 checkpoint; quarterly milestone audit
R10	Claims operating-model fix fails a third time	Medium	Medium–High	Chief Claims Officer	Q4 2026 scorecard conversion; 2027 KPI trend
R11	Urban pilot underperforms on loss ratio or service cost	Medium	Low–Medium	GM New Segments	Mid-2028 pilot gate

Three structural observations before the detail. First, the highest-likelihood risks (R2, R4, R9) are all already in motion — they are not scenario risks but base-case conditions the plan must beat. Second, the severe-impact risks (R1, R8) are both low-frequency, high-consequence, and both are managed by pre-commitment devices (gates, caps) rather than by monitoring alone. Third, no risk on this register is mitigated by adding initiatives; several are mitigated by refusing to add them — the "What MAPFRE will NOT do" list in The Recommended Strategy is itself the largest single mitigation in the plan.

R1. Parent appetite: the 2017 retrenchment reflex fires mid-program

Madrid's mandate is real but conditional. The parent raised group targets twice — to ROE >13% and a 93–94% combined ratio for 2026 [1] — and its stated U.S. frame is "profitable growth" with "not planning to broaden our footprint" [2]. But the same parent exited five states in 2017–19, ran off Florida, shut Verti USA, and told investors in February 2020 it wanted further exits [3]. AM Best still rates the U.S. unit's standalone operating performance "marginal," with the A rating explicitly supported by the parent [4]. A bad U.S. quarter — one adverse weather half, one reserve strengthening — against a group printing 92.2% combined ratios invites the reflex.

- **Likelihood/Impact:** Medium / Severe — a mid-program funding stop strands the Pillar 1 build half-shipped, the worst of all worlds.
- **Early warning:** year-1 tranche (~\$45–60M) approval slips past Q4 2026; Madrid commentary at FY2026 results (February 2027) omits U.S. growth language; the post-2026 strategic plan (first signals February 2027) reclassifies North America as harvest.
- **Mitigation:** the funding paper is built in Madrid's own grammar — \$85–135M is one-third to one-half of the \$246.7M of dividends Commerce exported through its loss-and-recovery years 2019–23 [5], structured as a reduced-dividend agreement (retained earnings, not new capital), ~50–70% offset at run-rate by Pillar 4 self-help, zero new-state capital, zero M&A, CR held inside the stated guardrail ($\leq 96.5\%$ in 2026–27, $\leq 96\%$ from 2028) — a U.S. bar above the group's 93–94% target that the funding paper has Madrid ratify explicitly, given Massachusetts mix. Critically, Madrid signs the YE2028 gate logic *in advance*, so a single bad quarter triggers the pre-agreed gate review, not an improvised retrenchment. Quarterly reporting to the parent leads with the CR guardrail, not the growth number.

R2. The AAA book walks faster and cheaper than the retention plan assumes

The JMA (>\$200M of 2025 premium, ~2–2.3 points of MA auto share on the composition assumption stated in the Financial Business Case) almost certainly dies on schedule 12/31/2026: the injunction was denied February 3, 2026, and the court framed the whole dispute as money damages [6][7]. MCIC is backed by the Auto Club Enterprises pool (AM Best A+), filed sharply reduced MA rates effective 1/1/2026, and is building a 370-job operations center (a \$7.1M private build-out, supported by ~\$7M of Rhode Island tax credits) explicitly scoped for RI/CT/MA with NY/NJ expansion [8]. A pool-subsidized carrier can price below stand-alone economics for years. The tail risk is settlement failure *plus* irrational pricing *plus* AAA marketing the Emblem hard into the January 2027 renewal wall.

- **Likelihood/Impact:** High / High — passive runoff retains only ~25–30% (–\$140–150M by 2029); the plan's 50–60% managed-retention target is the single largest defended-dollar item on the board.
- **Early warning:** monthly CAR share in AAA-heavy territories (MCIC showed zero measurable MA share through February 2026 [9] — any inflection is the signal); an MCIC quote path appearing on AAA's MA site; AAA-book retention through the January 2027 wall tracking below 45%.
- **Mitigation:** the bundle, not price, is the retention weapon — a home+auto+umbrella account is roughly 3x harder to move, and bundled retention runs 95% vs. 85% unbundled [10]. Premium-quality-weighted triage: if MCIC wants to buy the underpriced bottom quartile with pool subsidy, let it. Settlement architecture priced explicitly (renewal rights, member data, non-solicitation, paid second-carrier slot — non-equity only, per kill-list item 3 in The Recommended Strategy). Hard re-scope gate Q2 2027: if managed retention is tracking to passive levels, the \$10–20M spend redirects to the group-deviation portfolio.

R3. Channel conflict: the bind-online pilot reads as betrayal in a 100%-IA franchise

MAPFRE distributes through ~1,300 Massachusetts agencies that are nearly all also Progressive agencies. A mis-sequenced or mis-designed direct launch hands Safety — whose entire pitch is single-channel purity ("unlike some of our competitors who use multiple distribution channels" [11]) — a recruiting narrative, at the exact moment consolidators are industrializing book movement.

- **Likelihood/Impact:** Medium / High — a visible agent revolt puts the ~\$150–160M of consolidation-exposed premium (P1b) in play and poisons Pillar 1.
- **Early warning:** agent advisory council sentiment at the design preview (day 45–100); MAPFRE's share of top-400-agency quote stacks falling in the two quarters after announcement; abnormal Ivans book-roll activity out of MAPFRE among top-100 agencies.
- **Mitigation:** the design is the mitigation — the Plymouth Rock Prime mechanic, running peacefully in Massachusetts since October 2015: every bound policy assigned to a local agent at full commission and lifetime ownership, rate parity across channels, abandoned quotes recycled to agents as consented leads [12]. Sequencing is non-negotiable: bind launches only after Pillar 1 investments are visible, endorsed by the agent

council, paired with the no-direct-competition agent pledge Liberty and Progressive cannot make (Strategy 1c). The Citation/American Commerce paired-entity filing (the accepted MA template since 2008) stays in reserve if channel separation is ever needed [13]. Scale is capped by the standing-constraint register: pilot plus 15–25K steady state, nothing more without eight qualifying quarters.

R4. Progressive out-executes anyway: enablement buys parity, not advantage

Progressive took ~7 points of MA share in five years, much of it through MAPFRE's own agents [9][14], and sets the table-stakes bar the Pillar 1 rater/STP build merely meets. The risk is that MAPFRE spends \$28–42M to become adequate, share stabilizes for six quarters, and then resumes eroding as Progressive's segmentation and telematics depth (UBI as its single most predictive variable, at 3x the next best [15]) keep winning the quote stack.

- **Likelihood/Impact:** High / Medium–High — the +1.0-point recapture (\$74M) is the plan's largest single growth line.
- **Early warning:** the quarterly quote-stack metric (share of top-400-agency new-business quotes including a MAPFRE rate) rising while bind rates stay flat — the signature of parity-without-preference; Progressive MA share resuming +0.5 pt/quarter growth after mid-2027.
- **Mitigation:** by design, the program's weight sits where Progressive cannot follow quickly: the 280-group §193R deviation franchise with the participation rule waived through 2030 [16] (open to Progressive by filing, but a 12–24 month group-by-group replication build against the incumbent's anchor relationships — see Strategy 2b for the explicit "Progressive files in 2027" stress test); the Massachusetts homeowners machine (#1 at 10.62% [17]) feeding a bundle Progressive has no in-state property scale to match; the trilingual urban franchise (3–5 year copy time); agency ownership-layer agreements. The tripwire response is re-allocation across these moats, not spend escalation on the contested desktop.

R5. The regionals match the move: Safety and Plymouth Rock respond in kind

Safety runs the best agent-loyalty architecture in the state (loss-ratio incentive commissions, tiered clubs, #1-or-#2 position in 70%+ of its agencies [11]) and can match a comp escalation within one cycle at symmetric cost.

Plymouth Rock grew its IA group 23% in 2024 [18] and owns the Prime template MAPFRE is borrowing. Either can stand up a Safeco transition desk; the plan's assumption is only that MAPFRE moves first.

- **Likelihood/Impact:** Medium–High / Medium — a matched arms race leaves everyone poorer; the Safeco capture (\$35M) and part of the recapture arithmetic compress.
- **Early warning:** a public Safety or Plymouth Rock ex-Safeco recruiting campaign (none exists as of July 2026 [19]); competitor commission-schedule changes surfacing in agent channels; Safeco-desk appointment conversion falling below plan in months 4–6.

- **Mitigation:** speed on the perishable asset — the Safeco desk launches this quarter, with a monthly CEO metric, because the realistic uncontested window is 6–12 months; the consolidator platform agreements (P1b) sit at the *ownership* layer, where a change-of-control-surviving contract is a durable exclusivity no comp table matches; and the comp redesign ships only in its loss-ratio-gated form (kill-list item 7) — MAPFRE will not start the un-gated escalation Safety wins by matching.

R6. The DOI approves MotionSmart discount-only — or approves symmetry and enrollment stalls

A discount-only telematics relaunch re-runs the documented MotionSmart 1.0 failure: donating premium to good risks with no surcharge offset (the discount decayed from "up to 10%" at the 2021 launch to "up to 2%" today [20]). The second-order risk is regulatory success and behavioral failure — approval of the 8–10% / $\pm 20\%$ structure followed by enrollment stalling in single digits, leaving Snapshot skimming MAPFRE's best risks.

- **Likelihood/Impact:** Medium / Medium–High — 0.5–1.0 portfolio CR points by year 4 ($\approx \$12$ – 25 M/yr of loss-cost advantage) is the plan's principal pricing lever, and the only high-dimensional one MA law permits.
- **Early warning:** DOI disposition language on the filing; new-business enrollment tracking below $\sim 15\%$ at the 12-month mark against the 30% benchmark (Allstate's 30–40% proves achievability [15]); agent per-enrollment participation lagging in top agencies.
- **Mitigation:** the kill trigger is pre-committed in writing — discount-only approval means no launch, full stop. The filing leads with precedent (Plymouth Rock's DriveSafely holds 10% at quote with a $-20\%/+20\%$ renewal swing; Snapshot operates with surcharges [13]). Enrollment is engineered, not hoped for: point-of-sale defaults, agent per-enrollment incentives, and the third-party at-quote score filing (Arity IQ / TransUnion–CMT) as the second path to priced telemetry that reaches the agent channel an app cannot.

R7. Legislative shocks: the \$55 labor-rate floor and the MA Data Privacy Act

Two live Beacon Hill processes touch the plan's economics. S.797 would mandate a $\geq \$55$ /hour body-labor floor against a market-weighted insurer-paid average of $\sim \$49$; on the Advisory Board's own AIB analysis, a \$55 floor implies roughly $+\$22$ – 36 of annual loss cost per vehicle, ~ 1.8 – 2.9% of average premium — industry-wide and rate-recoverable, but with a recognition lag, and with an annual ratchet built into the bill's permanent board [21][22]. The MDPA sits in conference; every plausible outcome makes telematics geolocation opt-in sensitive data, and the House version attaches a private right of action for large data holders — class-action exposure for any at-scale geolocation program [23].

- **Likelihood/Impact:** Medium (floor is a 2027–28 risk more than 2026; MDPA enactable through January 5, 2027) / Medium.
- **Early warning:** whether S.797 clears Senate Ways and Means before formal sessions end July 31, 2026 [22]; the MDPA conference report's treatment of the private right of action and the financial-institution exemption; First Circuit right-to-repair mediation status reports.

- **Mitigation:** build the +\$6–9/hour severity scenario into 2027 rate indications now — the shock is symmetric across carriers, so the only real risk is filing lag; use MAPFRE's seat (one of three insurer seats) on the labor-rate Advisory Board to shape any floor toward survey-indexed designs [21]; reposition the DRP network as a cycle-time and quality lever, since a floor devalues rate negotiation. The telematics program is architected privacy-native from day one — opt-in, first-party, no third-party sharing, consent-logged — which converts the MDPA from threat to moat against incumbents carrying legacy data-broker plumbing.

R8. Concentration and catastrophe: a Northeast hurricane while the home book is scaling

The strategy deliberately deepens Massachusetts. The two-axis truth: MA personal auto is ~51% of U.S. premium, but Massachusetts all-lines is ~75–80% — and the growth plan adds property exposure in a state where the FAIR Plan already insures ~40% of Cape & Islands homes and voluntary nonrenewals more than tripled 2022–24 (3,483 → 13,000+) [24]. The 2024 home book's 30.0% loss ratio was benign weather, not skill [17]. An immature coastal tranche plus one Northeast hurricane, on a statutory surplus base that troughed at \$561M in 2023 [25], is a ratings conversation — and AM Best has repeatedly used geographic concentration as an explicit downgrade rationale, while MAPFRE's current rating is openly parent-supported [4].

- **Likelihood/Impact:** Low–Medium in any single year / Severe — a cat-driven CR breach triggers R1 simultaneously; this is the correlated tail.
- **Early warning:** coastal DWP approaching the cap; wind-zone TIV and PML drift in quarterly cat modeling; an MPIUA rate filing (none exists as of July 2, 2026 — the trigger is armed, not fired [24]); 1/1/2027 reinsurance pricing reversing the ~10–12% softening bought at 1/1/2026.
- **Mitigation:** pre-commitment, not prediction. The coastal tranche is hard-capped at \$30–40M DWP, gated on an actual approved MPIUA rate action (the hearing process gives 12+ months of visible lead time), bundled-only, inspection-driven, with percentage wind deductibles (kill-list item 5). The core parity play is inland/suburban, where the \$275M gap mostly sits. The group cat program plus softened reinsurance covers the tranche; the cap is a board-level constraint, not a management target.

R9. Execution capacity: the program breaks at the executive layer first

This is the risk the judges rated highest and the one history supports. The organization fielded Guidewire (2020), ePICS, One Inc, and Shift — and still cannot bind a policy online, still sits in the bottom tier of J.D. Power satisfaction and claims rankings (see the Situation Assessment [26]), and has shipped no agent-facing API program. Fourteen initiatives now land on that same management bench, three of them with unmovable 2026 deadlines.

- **Likelihood/Impact:** High / High — bandwidth failure doesn't kill one initiative; it degrades all of them below the visibility threshold agents and Madrid require.

- **Early warning:** the day-100 checkpoint (October 10, 2026) missing more than one of its six readouts; EZLynx panel and STP engineering milestones slipping in consecutive quarters; key hires (API engineering, bilingual claims leadership, AAA settlement lead) open past 120 days.
- **Mitigation:** one accountable owner per initiative, named in The Recommended Strategy; a program office reporting to the CEO; a brutal 2026 priority rule — the AAA wall, the CAR RFP, and the Safeco desk are the only must-wins; everything else may slip a quarter, those three may not. The kill list is enforced as a standing board constraint precisely so killed initiatives cannot reabsorb attention. Sequencing rules (3c after Pillar 1; coastal after MPIUA; scale after gates) exist to keep the concurrent-initiative count inside the organization's demonstrated span.

R10. The claims fix fails a third time — and takes the self-funding with it

Pillar 4 is the program's bank: \$20–40M/yr (~1–1.5 CR points) of subrogation, touchless, and steering economics funds the opex story Madrid is being told. But the constraint has never been software — it is operating model, and this organization has already proven it can deploy tools without moving outcomes. Industry benchmarks say the money is real (salvage+subrogation averages 4.5% of net claims paid, 6.2% among firms with any recovery; ~15% of claims close with a missed subrogation opportunity; \$15–20B of annual industry leakage [27][28]); capturing it is a management problem.

- **Likelihood/Impact:** Medium / Medium–High — if self-help underdelivers, the program's net cost to Madrid roughly doubles and the CR guardrail loses its cushion.
- **Early warning:** claims-experience KPIs (touchless %, cycle time, texted-claims share, claimant NPS) failing to appear on the executive scorecard by Q4 2026; net recovery rate flat two quarters after the subrogation unit stands up; 2027 J.D. Power claims score static.
- **Mitigation:** the operating-model change is the deliverable — claims KPIs on the same executive scorecard as the combined ratio, managed to cycle-time and NPS targets, never headcount targets; an empowered claims operating-model leader as a named critical hire; the subrogation vendor contracted with contingent, recovery-linked pricing so underperformance is the vendor's problem too. Repair cycle time is the industry's proven retention lever [29] — and claimants are the book's most shop-prone customers.

R11. The urban pilot underperforms — loss ratios, service costs, or talent

The urban credit-harvest thesis is economically sound (each voluntary car year in the 11 credit territories earns ~\$2,900 of MAIP credit offset plus new premium, and MAIP rates are the most adequate in years, with assignments down 38.4% post-July-2025 [30]) but operationally unproven inside MAPFRE, and the trilingual service build is the genuine talent lift in the plan.

- **Likelihood/Impact:** Medium / Low–Medium — deliberately gated; a failed pilot costs single-digit millions, not the program.

- **Early warning:** pilot loss ratios above the voluntary book after credit offset at the 12-month read; bilingual adjuster/CSR hiring below plan; service metrics (in-language NPS, cycle time) lagging the book.
- **Mitigation:** pilot-first in the 2–3 richest credit-factor territories (~3,000 voluntary car years by mid-2028); the 10K-car commitment and full trilingual claims build are gated on pilot loss ratios and service metrics; telematics-at-quote is the underwriting tool; budget already raised to \$10–18M to price the talent lift honestly. A clean kill at the gate is an acceptable outcome — the credit-drag shed (\$3–9M/yr) has independent value.

Hard dependencies: what the plan cannot function without

Dependency	Specific requirement	Consequence if missed	First test
Parent capital & mandate	\$85–135M/3yrs, year-1 tranche ~\$45–60M; Madrid sign-off on YE2028 gate logic	Program stalls half-built (R1)	Madrid funding paper, days 45–100
Regulatory approvals	Symmetric MotionSmart structure; group-deviation deepenings; CAR commercial servicing RFP won; MPIUA filing before coastal scaling	Pricing lever lost (R6); \$50M commercial line and seat economics lost; coastal stays shelved	MotionSmart filing 2026; CAR RFP decision by 12/31/2026
Talent	Bilingual (Spanish/Portuguese) claims/CSR/agency staff; API and digital product engineering; claims operating-model leader; AAA settlement lead	R9, R10, R11 all worsen	Requisitions open day 15–45; 120-day fill tracking
Technology (productization only)	Rater APIs, STP rules, bind MVP, group enrollment on the live Guidewire core; CMT extension; subrogation vendor — no replatforming anywhere	Pillar 1 credibility with agents fails	EZLynx negotiation opened days 15–45
Data (data-room)	AAA-sourced policy file; bundle attach on the 909K-exposure book; group deviation premium ladder; commercial-auto diagnostics; West Coast economics	Retention targeting, bundle arithmetic, and hold/fix/sell all run blind	Data-room sprint, days 15–45

Pre-mortem: the three most likely ways this strategy fails

It is July 2029 and the strategy has failed. The three most probable autopsies, in order:

1. Death by calendar (most likely). The failure was fully visible in 2026. The Safeco desk launched in November instead of July — into a market where Safety had already announced its own program — and captured 8K exposures instead of 25K. The AAA re-anchoring campaign missed the September–December renewal-communications window, so the January 2027 wall arrived with passive-level retention; the Q2 2027 re-scope gate simply confirmed \$140M was gone. The CAR RFP was treated as a procurement task instead of a board priority and the seat went to a hungrier bidder. None of these was a strategy error; all were sequencing failures on deadlines that were known, dated, and unforgiving. *The defense is already in the plan: the three 2026 must-wins are the only must-wins, with monthly CEO-level metrics — the pre-mortem exists so that no one can later claim the calendar was a surprise.*

2. Parity without preference, and Madrid loses patience (second). Pillar 1 shipped — competently, even. But rater presence and STP made MAPFRE *adequate* on the agent desktop, and adequate is not a reason to move a book. Progressive's segmentation stayed a cycle ahead; the quote-stack metric rose while bind share didn't; share stabilized at ~18% instead of recapturing to 19%. Meanwhile the program spent \$90M, and at FY2028 results a Madrid facing its own 93–94% CR bar read "flat share, elevated spend" as failure and pulled the year-3 tranche — the 2017 reflex, on schedule. The recovery path was in the plan but not exercised aggressively enough: re-allocating from the contested desktop to the uncontested moats (groups, bundle, urban) at the first tripwire, and holding Madrid to the gate logic it pre-signed instead of relitigating the program quarterly. *Fail this way and the fortress thesis was right but the execution altitude was wrong — MAPFRE fought Progressive where Progressive is strongest.*

3. The organization does what it has always done (third, and slowest). Every initiative technically launched. But the claims scorecard change died in committee, so cycle times and J.D. Power scores never moved and the \$20–40M of self-help came in at \$8M; MotionSmart won its symmetric filing but enrollment stalled at 11% because agents were never paid to care; the bind pilot shipped six months late with a degraded funnel after two rounds of internal compromise. No single failure was fatal. Collectively they meant the program's self-funding evaporated, the customer-experience flank stayed open, and the inertia-held #1 share kept bleeding at ~0.4 points a year — the drift baseline wearing a strategy costume. *This is the failure mode the operating-model provisions (executive scorecard, named owners, kill-trigger discipline, gated pilots) exist to prevent; if those provisions are negotiated away in implementation, this chapter predicts the outcome.*

The common thread across all three: this strategy fails through softness in 2026, not through surprises in 2028. The board's risk-management job is therefore concentrated in the next six months — protect the three must-wins, enforce the gates and caps as written, and treat every request to renegotiate a kill-list item or a sequencing rule as what it is: the first early-warning indicator on this register.

10. Appendix: Methodology & Sources

This appendix documents how the strategy was built and how far each number in it can be trusted. It covers four things: (1) the four-stage adversarial process that produced the document; (2) the limits of that process — what is public-source fact, what is planning estimate, and what awaits the client data room; (3) the full fact-check register — 60 load-bearing claims independently re-verified, with the three corrections applied throughout the document; and (4) a consolidated, de-duplicated bibliography of every source cited across the 22-brief research corpus, grouped by type.

The document was built to be attacked before it was built to persuade

The engagement deliberately separated fact-finding, verification, strategy formation, and synthesis into four stages with different owners, so that no single analyst's enthusiasm — or blind spot — could survive into the final recommendation unchallenged.

Stage 1 — Multi-analyst research corpus (22 briefs, ~659 source citations). Independent analysts produced 22 research briefs across five thematic clusters, each with its own sources section, as-of dates on every figure, and an explicit register of open questions not answerable from public sources. Analysts were assigned overlapping territory by design — for example, MAPFRE's financial baseline was built three times (parent-strategy view, company-profile view, statutory-statement view) — so that discrepancies would surface as conflicts to resolve rather than errors to discover later. Several were resolved this way, including the client's own "~80% Massachusetts personal auto" framing (corrected to ~75–80% of premium in Massachusetts across *all lines*, with MA private passenger auto ~51%), the group-level NAIC complaint-index distortion (pool subsidiaries inflate the group figure; the flagship Commerce entity indexes ~0.62), and a "\$291M" group-premium typo in the state examination report (actually ~\$2.91B).

Cluster	Briefs	Coverage
Company	3	Parent strategy and mandate; US company profile; statutory financial baseline
Market	7	MA auto market; regulation; competitors; customer demographics; rate-filing price position; MAIP credit economics; 2026–27 regulatory horizon
Distribution	3	Independent-agent channel economics; agency consolidation and the Safeco window; AAA Northeast endgame
Growth options	7	Direct/digital economics; direct-to-agent calibration; adjacent products; geographic options; small commercial (two briefs); concentration-escape case studies
Enablers	2	Technology/claims/operations; telematics and UBI

Stage 2 — Adversarial fact-check (60 claims; 57 confirmed, 2 corrected, 1 unsupported). A separate verification team extracted the 60 most load-bearing quantitative claims — the ones the strategy's arithmetic actually stands on — and re-verified each against primary documents wherever possible: statutory examination

PDFs, CAR residual-market reports, SEC filings, DOI decisions, NAIC profitability tables, and the companies' own earnings releases, rather than the trade-press articles that first surfaced them. The test was adversarial: the checker's job was to break the claim, not to source it. Fifty-seven survived intact, frequently with independent second-source corroboration; two were corrected and one was ruled unsupported (all three detailed below), and the corrections were propagated through every chapter of this document. Where the fact-check flagged a nuance short of an error — e.g., MAPFRE's 97.8% "US auto" combined ratio is technically North America auto including Puerto Rico, or the +12.7% MA home-market growth is measured on premium paid rather than written premium — the document carries the precise framing.

Stage 3 — Competing strategy panels with independent judging. Three strategy teams built full proposals from the same corpus under different theses: **Fortress & Deepen** (win the home market and earn the right to expand), **Transform** (direct/digital channel transformation), and **Expand** (geographic and product adjacency). Three judges then scored the proposals independently on three dimensions — capital efficiency, executability, and competitive durability. Fortress & Deepen scored highest on all three panels (86 / 84 / 84) and became the spine of this document. The panel structure did real work: the judges killed Transform's year-5 direct-channel scale forecast and Expand's New England state builds and funded bolt-on acquisition outright, while forcing the winning proposal to absorb the losers' best content — the bind-online sequencing and guardrails and falsifiable-metrics governance from Transform; the CAR servicing-carrier deadline, the 90-day commercial-auto diagnosis, and the West Coast hold/fix/sell review from Expand. Where judges split, the resolution is recorded in the main document's "What MAPFRE will not do" constraints (e.g., affinity-club pitches survive only in non-equity form; the urban program is pilot-gated; the coastal tranche carries the stricter \$30–40M cap).

Stage 4 — Synthesis blueprint. A senior-partner synthesis consolidated the winning proposal, the grafts, the judge rulings, and the fact-check corrections into a single decision-complete blueprint that governs every chapter. Two accounting disciplines from that blueprint apply throughout: *defended* premium is never counted as growth and never carries a growth multiple, and every impact figure is either traced to a cited source or explicitly labeled a planning assumption with a falsifiable leading indicator attached.

What this process does and does not guarantee

Public-source basis. The fact base is built from public primary documents and reputable trade data. It is strong on market structure, competitor economics, and regulatory mechanics; it cannot see inside MAPFRE. Six internal datasets were flagged as first-priority data-room requests because the briefs could not source them publicly: the AAA-sourced policy file; the bundle attach rate on the ~909K-exposure auto book; group-level deviation premium; commercial-auto book diagnostics; West Coast block economics; and the 2024–25 statutory statements (paid NAIC/S&P/AM Best access).

Known instrument limits, declared where they bite. CAR market-share figures are written-exposure-based and cumulative year-to-date (comparable only same-month across years); NAIC premium shares differ modestly from CAR exposure shares; SERFF filing dispositions returned HTTP 403 to automated retrieval and require manual pulls; MAIP program loss ratios are not public (the \$3–9M/yr assignment-drag estimate is assumption-flagged); consumer-aggregator premium figures conflict by methodology and are used only as context, never as planning

inputs. Vendor-reported performance claims (e.g., Tractable's 90% touchless figure) are labeled as vendor-sourced. Each brief closes with its own open-questions register; none of those open items is silently filled with an estimate in this document.

Negative findings are reported as negative findings. Where the research needed an absence to be true — e.g., no competitor recruiting campaign aimed at ex-Safeco agents as of July 2, 2026; no MPIUA rate filing docketed; no approved MA filing using a third-party at-quote telematics score — the briefs record the systematic search performed and treat the result as "not publicly documented," not "not happening."

Fact-check register: 60 claims, three findings against

The three corrections — applied throughout this document:

- 1. J.D. Power New England auto satisfaction (corrected).** An early draft claimed MAPFRE scored 595 in the 2025 study and was lowest in the region. Verification against the archived 2025 rank chart shows MAPFRE scored **597** in the 2025 study and was **not** lowest — Progressive (582), Farmers (587), and The Hanover (594) scored lower; Amica's 735 stands. The 595 figure is MAPFRE's score in the **2026** study (released June 2026, where Farmers, at 567, was lowest). The document therefore describes MAPFRE's position as a chronic bottom-quintile pattern (597 in 2025; 595 in 2026; vs. Amica's 735), not as lowest-in-region.
- 2. Subrogation benchmarks (corrected).** The "5.1% of paid losses recovered / 16% missed" pairing could not be verified against its original benchmark source. The document instead uses the peer-reviewed NAIC Journal of Insurance Regulation figures — salvage plus subrogation averaging **4.5%** of net claims paid across all firms and **6.2%** among firms with any recovery — and the consistently cited industry missed-opportunity rate of **~15%** of claims closed with a missed subrogation opportunity. The \$15B+ annual industry-leakage figure was confirmed (estimates run \$15–20B).
- 3. MAPFRE group technology investment (unsupported — removed as a current fact).** The ">€600M/year in technology" figure is genuine MAPFRE messaging but traces to the **November 2018** MAPFRE Open Innovation announcement (€600M/yr technology + €100M/yr innovation); the October 2025 technology-hubs release cited for it contains no investment figure, and no 2024–25 primary source restates it. The document does not assert a current parent technology-spend number.

The full register. Sixty claims were tested; the table abridges each claim and its verification basis (primary source in parentheses; full citations in the bibliography below).

#	Claim (abridged)	Verdict	Verification basis
1	Commerce MA PPA share Dec 2025: 18.33% / 908,833 exposures, down from ~22.1% (2020)	Confirmed	CAR data via Agency Checklists 2nd Look 2026; arithmetic re-checked; corroborated across series
2	MAPFRE North America FY2025: €139M result (+41.8%); CR 95.4%; US €2.3B premiums, €118.2M result	Confirmed	MAPFRE FY2025 earnings release (primary); Atlas Magazine corroboration

#	Claim (abridged)	Verdict	Verification basis
3	NA FY2024: €97.6M result vs –€1.8M (2023); CR 98.7% (–6.7 p.p.)	Confirmed	MAPFRE FY2024 earnings release (primary)
4	NA non-life CR: 105.4% (2023) → 98.7% (2024) → 95.4% (2025); auto CR 97.8% (2025)	Confirmed	MAPFRE 2023/2024/2025 annual results (primary)
5	NA premiums ~€2.8B FY2024 (US ~€2.4B); FY2025 >€2.6B, ~flat local currency	Confirmed	MAPFRE FY2024/FY2025 releases; "–1%" was the 9M-2025 reading — within rounding
6	Commerce 2023 statutory: –\$109.2M underwriting, –\$41.5M net, surplus \$561.0M	Confirmed	MA DOI 2023 financial examination PDF (primary; figures match to the dollar)
7	Cumulative US auto rate increases Jan 2022–YE2023: >29%	Confirmed	MAPFRE 2023 annual earnings presentation (primary)
8	MAPFRE 2023 US PPA DWP \$1.40B (rank 21); out of top 25 in 2024	Confirmed	NAIC market-share reports via Agency Checklists (two independent editions)
9	AAA Northeast JMA >\$200M 2025 premium; expires Dec 31, 2026	Confirmed	MAPFRE's court complaint via Insurance Journal; Law360, Carrier Management corroboration; figure originates in MAPFRE's own filing
10	MAPFRE MA PPA 2024: \$1,325.9M / 17.96% (#1)	Confirmed	NAIC table via Agency Checklists; CAR exposure data corroborates #1
11	MAPFRE MA homeowners 2024: \$399.1M / 10.62% (#1) / 30.0% loss ratio	Confirmed	NAIC table via Agency Checklists; MA DOI 2024 home report corroborates #1
12	MAPFRE voluntary MA home share 12.5% (2023) → 11.0% (2024)	Confirmed	MA DOI annual home-insurance reports (primary, both years)
13	Commerce: 30.4% of MAIP assigned business vs 18.1% voluntary share (21,433 car years, PY2025@10mo)	Confirmed	CAR residual-market volume report PDF (primary; all three figures exact)
14	MotionSmart discount now "up to 2%" vs up-to-10%/20% at July 2021 launch	Confirmed	Current MAPFRE product page vs 2021 launch release (Business Wire)
15	Commerce writes six states (licensed in eight); group top-5 states MA/CT/CA/WA/RI	Confirmed	MA DOI 2023 examination report (primary, verbatim)
16	MAPFRE US 2020: \$1.9B written premium, 12 states	Confirmed	MAPFRE 2021 Fact Sheet; Integrated Report 2020 corroborates
17	2008 Commerce acquisition: ~\$2.21B at \$36.70/share	Confirmed	Commerce Group SEC 8-K (primary); Insurance Journal
18	AM Best A (Excellent), stable; "marginal operating performance" in standalone assessments	Confirmed	Oct 2024 AM Best release; standalone wording from 2020–22 group assessments
19	Group 2026 targets raised at Mar 2026 AGM: ROE >13%, CR 93–94%	Confirmed	MAPFRE AGM release; four independent trade reports
20	MA PPA DWP 2024: \$7.381B (47% of New England's \$15.6B)	Confirmed	NAIC statutory data via Agency Checklists; internally consistent state build-up
21	MA concentration Oct 2025: top 5 = 59.1%, top 10 = 84.6% of 4,251,405 exposures	Confirmed	CAR data via Agency Checklists 1st Look 2026 (arithmetic re-checked)

#	Claim (abridged)	Verdict	Verification basis
22	Progressive MA: 5.81% (Nov 2021) → 12.32% (Feb 2026); passed GEICO May 2025	Confirmed	Three separate CAR-based reports; intermediate readings consistent
23	GEICO MA: 16.28% (Sept 2022) → 11.44% (Feb 2026)	Confirmed	CAR data, both endpoints plus intermediates
24	Cumulative MA auto rate increases since 2022 ~38%; 2023 top-7 average 12%+ (GEICO ~26%)	Confirmed	Boston Globe (Oct 2024); GEICO figure corroborated by S&P Global
25	July 1, 2025 minimum-limits change (25/50/30): ~+36% on minimum-coverage premiums (~\$524 → \$711)	Confirmed	Bankrate/Quadrant data; MA DOI bulletin confirms limits/date; rate-data estimate, not observed outcome
26	Statewide MA PPA direct loss ratio 2024: 62.2%	Confirmed	NAIC annual-statement data via Agency Checklists; consistent with S&P national figure
27	MA home market 2024: ~\$3.6B written premium; +12.7% premium paid	Confirmed	MA DOI 2024 home report (primary); growth measured on premium paid (~\$3.9B)
28	Safety + Plymouth Rock + Arbella MA share Dec 2025: 24.26%, stable	Confirmed	CAR data via Agency Checklists (two consecutive reports)
29	Progressive + GEICO ~23.5% of MA exposures Aug 2025	Confirmed	CAR data; overtake timing corroborated by series
30	Safety FY2024: DWP +20.4%, revenue >\$1B first time; CR 101.1% vs 107.7%	Confirmed	Safety Q4/FY2024 earnings release (primary)
31	Plymouth Rock IA group 2024: \$1.3B premium, +23%, CR just under 100%	Confirmed	Plymouth Rock 2024 Chairman's Letter (primary)
32	Plymouth Rock group: >\$2B premium across six Northeast states	Confirmed	Company financial-information page (primary)
33	GEICO 2024 ad spend +67% to ~\$1.4B	Confirmed	S&P Global Market Intelligence (internally consistent)
34	Progressive 2024 ad spend record ~\$3.5B	Confirmed	S&P Global Market Intelligence analysis of regulatory data
35	Progressive FY2024 personal lines NPW ~\$63.5B (+23%); direct +27%, agency +21%	Confirmed	Progressive 2024 Form 10-K (primary)
36	MA IA penetration 78.8% of P&C premium (2024) — highest US state	Confirmed	Big "I" 2025 Market Share Report; two independent citations
37	IA share of US personal lines 39.5% (2025), up from 35.7% (2020)	Confirmed	Big "I" 2026 report; prior-year report for baseline
38	Safety historical top-tier commission 18% vs 13% regulated minimum; up to 8% loss-ratio incentive	Confirmed	Safety FY2007 Form 10-K on EDGAR (primary, verbatim)
39	Progressive YTD Sept 2025: direct CR 89.6 (expense 22.3) vs agency 85.0 (20.3)	Confirmed	Progressive Q3 2025 Form 10-Q (primary)
40	GEICO 2024 CR 81.5 (expense ~9.7); \$7.81B pre-tax underwriting profit	Confirmed	S&P Global; consistent with Berkshire 10-K
41	Bundled home+auto retention 95% vs 85% unbundled	Confirmed	J.D. Power 2022 US Home Insurance Study (primary PDF)

#	Claim (abridged)	Verdict	Verification basis
42	~21M US policyholders shared telematics data in 2024 (28% CAGR since 2018)	Confirmed	IoT Insurance Observatory research; single underlying dataset (caveat noted)
43	Record shopping Q4 2025: 47.1% of policies shopped; direct new business +12.6% vs IA -0.1%	Confirmed	LexisNexis Insurance Demand Meter release (primary)
44	NH PPA 2023: +4.7% underwriting margin, 10.4% RNW — best adjacent state	Confirmed	NAIC Profitability by Line by State 2023 (primary, p.195)
45	NY PPA 2023: -17.2% underwriting margin, -3.8% RNW on \$16.5B market	Confirmed	Same NAIC report (primary)
46	MAPFRE 595 in J.D. Power 2025 New England study; lowest in region	Corrected	2025 score was 597 and not lowest (Progressive 582, Farmers 587, Hanover 594); 595 is the 2026-study score. Archived 2025 rank chart
47	Commerce 18.22% / 624,158 exposures Aug 2025 (from 19.02% Dec 2024)	Confirmed	CAR data via Agency Checklists; exposure bases differ (full- vs partial-year), shares match
48	NA CR FY2025 95.4% (vs ~105% 2023); auto CR 97.8%	Confirmed	MAPFRE FY2025 results; 97.8% is NA auto incl. Puerto Rico (nuance carried)
49	NA net result FY2025 €139M (US €118.2M; vs -€1.8M FY2023)	Confirmed	MAPFRE FY2025 and FY2023 results (primary)
50	83% of agents would write more with real-time appetite/quoting in AMS (Ivans, 1,000+ agents)	Confirmed	Ivans 9th Annual Connectivity Survey release (primary)
51	J.D. Power 2025 IA study: +274-pt satisfaction gap for "very easy" carriers; Erie tops at 754	Confirmed	Two independent reports of the study
52	J.D. Power 2025 Auto Claims: industry 700/1,000; cycle time 19.3 days (from 22.3)	Confirmed	J.D. Power release; Claims Journal corroboration
53	AAA JMA ~\$200M/yr; injunction denied Feb 2026	Confirmed	Insurance Journal (Feb 3, 2026); Carrier Management (Feb 4, 2026)
54	Subrogation: ~5.1% of paid losses recovered; ~16% missed; \$15B+ leakage	Corrected	NAIC JIR study: 4.5% of net claims paid (6.2% among recovering firms); ~15% missed; \$15–20B leakage confirmed
55	Best-in-class AI photo estimating: 90% touchless (Admiral Seguros/Tractable)	Confirmed	Vendor case study; accurately reported but vendor-sourced only (caveat carried)
56	MAPFRE group tech investment >€600M/yr "as of 2024–25"	Unsupported	Figure dates to Nov 2018 Open Innovation announcement; cited 2025 release contains no figure; no current primary source
57	MAPFRE US footprint Nov 2023: 11 states, 3,000+ independent agents	Confirmed	Business Wire release (primary, verbatim)
58	MA commercial auto 2024: \$1.43B DWP, 60.53% loss ratio (largest in New England)	Confirmed	Statutory data via Agency Checklists
59	Commerce retakes #1 in MA commercial auto YTD Feb 2026: 13.15% vs Safety 13.05%	Confirmed	CAR data via Agency Checklists (May 2026)

#	Claim (abridged)	Verdict	Verification basis
60	IAs place 87.2% of US commercial lines premium (2024)	Confirmed	Big "I" 2025 Market Share Report (primary)

Consolidated bibliography

The 22 corpus briefs cite ~659 numbered source entries; after de-duplication these resolve to **529 unique source documents**, consolidated below and grouped by type. Where the same document was cited through multiple URLs (e.g., a MAPFRE earnings release on both mapfre.com and mapfreinsurance.com, or an AM Best action via Business Wire and Morningstar reprints), one canonical entry is kept and mirrors noted. Series (CAR market-share reports, agency-M&A trackers, rate manuals) are grouped as series. Reliability tiering follows the order of the groups: regulatory/statutory records and audited filings anchor the arithmetic; company disclosures and rating-agency actions anchor competitor economics; trade and research sources provide market color; consumer-comparison sites are used directionally only.

Source type	Approx. unique documents
A. Regulatory, statutory, and residual-market records	~85
B. SEC and securities filings	~15
C. MAPFRE group primary disclosures	~35
D. Competitor and counterparty primary disclosures	~70
E. Rating-agency actions (AM Best)	~15
F. Trade press	~175
G. General press	~30
H. Research, data, and benchmark providers	~55
I. Vendor and platform sources	~40
J. Consumer-comparison and review sites (directional only)	~20

Sources introduced by the adversarial fact-check

The verification pass added a small number of sources not cited in the corpus briefs, used solely to confirm or correct claims: the archived July 2025 transcription of the J.D. Power 2025 New England rank chart — <https://web.archive.org/web/20250805012048/https://www.insurance.com/auto-insurance/jd-powers-best-and-worst-car-insurance-companies-for-customer-satisfaction/> ; SubroIQ, "Missed Subrogation by the Numbers" (Apr 2025) — <https://www.subroiq.com/2025/04/missed-subrogation-by-the-numbers/> ; CLARA Analytics on subrogation leakage — <https://claraanalytics.com/blog/the-hidden-drain-on-casualty-claims-why-subrogation-leakage-keeps-happening/> ; El Español on MAPFRE's 2018 €600M/€100M technology-and-innovation announcement — https://www.elespanol.com/invertia/empresas/20181127/mapfre-destinara-millones-anuales-soluciones-innovadoras-tecnologia/356464618_0.html ; Atlas Magazine on MAPFRE FY2025 results — <https://www.atlas-mag.net/en/articles/mapfre-results-end-december-2025> ; the LexisNexis Q4 2025 Demand Meter release as distributed on PR Newswire — <https://www.prnewswire.com/news-releases/us-auto-insurance-policy-shopping-and-new-business-growth-continue-to-break-records-in-q4-with-hot-readings-on-the-lexisnexis-us-insurance->

[demand-meter-302689776.html](#) ; Agency Checklists 4th Look 2025 (Jul 14, 2025) — <https://agencychecklists.com/2025/07/14/4th-look-2025-market-share-report-for-ma-auto-marketplace-76201/> ; and Agency Checklists 5th Look 2021 (Oct 26, 2021) — <https://agencychecklists.com/2021/10/26/5th-look-the-massachusetts-private-passenger-auto-insurance-marketplace-55007/>

Citation conventions used in this document: figures carry as-of dates; CAR figures are written-exposure-based, NAIC figures premium-based, and the basis is stated wherever the two could be confused; "defended" premium is reported separately from growth and never double-counted; every unverifiable figure is labeled an assumption and paired with the falsifiable leading indicator that would disprove it. Corpus compiled and verified as of July 2, 2026.
